Quantitative Methods for Second Language Research Carsten Roever, Aek Phakiti, 2017-07-20 *Quantitative Methods for Second Language Research* introduces approaches to and techniques for quantitative data analysis in second language research with a primary focus on second language learning and assessment research. It takes a conceptual problem solving approach by emphasizing the understanding of statistical theory and its application to research problems while paying less attention to the mathematical side of statistical analysis. The text discusses a range of common statistical analysis techniques presented and illustrated through applications of the IBM Statistical Package for Social Sciences SPSS program. These include tools for descriptive analysis e.g. means and percentages as well as inferential analysis e.g. correlational analysis, t tests and analysis of variance ANOVA. The text provides conceptual explanations of quantitative methods through the use of examples, cases and published studies in the field. In addition, a companion website to the book hosts slides, review exercises and answer keys for each chapter as well as SPSS files. Practical and lucid, this book is the ideal resource for data analysis for graduate students and researchers in applied linguistics.
