**Differential Equations, Dynamical Systems, and an Introduction to Chaos** Morris W. Hirsch, Stephen Smale, Robert L. Devaney, 2013 Differential Equations Dynamical Systems and an Introduction to Chaos now in its third edition covers the dynamical aspects of ordinary differential equations It explores the relations between dynamical systems and certain fields outside pure mathematics and continues to be the standard textbook for advanced undergraduate and graduate courses in this area Written for students with a background in calculus and elementary linear algebra the text is rigorous yet accessible and contains examples and explorations to reinforce learning **BACK COVER**

**Modeling Neural Circuits Made Simple with Python** Robert Rosenbaum, 2024-03-19 An accessible undergraduate textbook in computational neuroscience that provides an introduction to the mathematical and computational modeling of neurons and networks of neurons Understanding the brain is a major frontier of modern science Given the complexity of neural circuits advancing that understanding requires mathematical and computational approaches This accessible undergraduate textbook in computational neuroscience provides an introduction to the mathematical and computational modeling of neurons and networks of neurons Starting with the biophysics of single neurons Robert Rosenbaum incrementally builds to explanations of neural coding learning and the relationship between biological and artificial neural networks Examples with real neural data demonstrate how computational models can be used to understand phenomena observed in neural recordings Based on years of classroom experience the material has been carefully streamlined to provide all the content needed to build a foundation for modeling neural circuits in a one semester course Proven in the classroom Example rich student friendly approach Includes Python code and a mathematical appendix reviewing the requisite background in calculus linear algebra and probability Ideal for engineering science and mathematics majors and for self study

**Chaos and Dynamical Systems** David P. Feldman, 2019-08-06 Chaos and Dynamical Systems presents an accessible clear introduction to dynamical systems and chaos theory important and exciting areas that have shaped many scientific fields While the rules governing dynamical systems are well specified and simple the behavior of many dynamical systems is remarkably complex Of particular note simple deterministic dynamical systems produce output that appears random and for which long term prediction is impossible Using little math beyond basic algebra David Feldman gives readers a grounded concrete and concise overview In initial chapters Feldman introduces iterated functions and differential equations He then surveys the key concepts and results to emerge from dynamical systems chaos and the butterfly effect deterministic randomness bifurcations universality phase space and strange attractors Throughout Feldman examines possible scientific implications of these phenomena for the study of complex systems highlighting the relationships between simplicity and complexity order and disorder Filling the gap between popular accounts of dynamical systems and chaos and textbooks aimed at physicists and mathematicians Chaos and Dynamical Systems will be highly useful not only to students at the undergraduate and advanced levels but also to

researchers in the natural social and biological sciences

### Accelerating

Expansion Gordon Belot, 2023-07-25 Accelerating Expansion explores some of the philosophical implications of modern cosmology focused on the significance that the discovery of the accelerating expansion of the Universe has for our understanding of time geometry and physics The appearance of the cosmological constant in the equations of general relativity allows one to model universes in which space has an inherent tendency towards expansion This constant introduced by Einstein but subsequently abandoned by him returned to centre stage with the discovery of the accelerating expansion This pedagogically oriented essay begins with a study of the most basic and elegant relativistic world that involves a positive cosmological constant de Sitter spacetime It then turns to the relatives of de Sitter spacetime that dominate modern relativistic cosmology Some of the topics considered include the nature of time and simultaneity in de Sitter worlds the sense in which de Sitter spacetime is a powerful dynamical attractor the limited extent to which observation can give us information about the topology of space in a world undergoing accelerated expansion and cosmologists favourite sceptical worry about the reliability of evidence and the possibility of knowledge the problem of Boltzmann brains
