Nonlinear Systems Christos K. Volos,2017 A non linear system is a set of nonlinear equations which may be algebraic ordinary differential partial differential fractional integral or a combination of these Especially nowadays the term dynamical system is used as a synonym of nonlinear systems where the nonlinear equations represent the evolution of a solution over time So the notion of dynamical systems arose following the name of equations governing the motion of a system of particles even though the nonlinear system may have no application to mechanics Also from an engineering point of view a nonlinear system may be represented with a feedback loop in which the output of an element is not proportional to its input Over the last few decades nonlinear systems have been used to describe a great variety of phenomena in social and life sciences as well as in physical sciences and engineering The theory of nonlinear systems has applications to problems of population growth economics chemical reactions celestial mechanics physiology of nerves onset of turbulence regulation of heartbeats electronic circuits cryptography secure communications and many others Nonlinear dynamical systems which present chaotic behaviour are of great importance due to their applications in science and engineering Chaotic systems are nonlinear dynamical systems and maps that are highly sensitive to initial conditions The sensitivity of initial conditions is usually called the butterfly effect for dynamical systems and maps So nowadays the design and analysis of nonlinear systems and especially chaotic systems has gained the interest of the research community due to the fact that many phenomena on financial physical biological chemical mechanical and engineering systems can be modelled and studied through the perspective of non linear

dynamics These nonlinear systems can be modelled by discrete time or continuous time mathematical models This book aims to bridge the gap between the design analysis and applications which are the two research stages on the progress of nonlinear systems and also which open up some new directions of real applications where chaos can be put up to technological use including secure communication systems electronic circuits design memristors and radar Finally this book can serve as an updated and handy reference for university professors graduate students laboratory researchers as well as physicists and applied mathematicians who are interested in studying the chaos and its applications through the field of nonlinear systems

Computational Solution of Nonlinear Systems of Equations Eugene L. Allgower, Kurt Georg, 1990

Nonlinear equations arise in essentially every branch of modern science engineering and mathematics However in only a very few special cases is it possible to obtain useful solutions to nonlinear equations via analytical calculations As a result many scientists resort to computational methods This book contains the proceedings of the Joint AMS SIAM Summer Seminar Computational Solution of Nonlinear Systems of Equations held in July 1988 at Colorado State University The aim of the book is to give a wide ranging survey of essentially all of the methods which comprise currently active areas of research in the computational solution of systems of nonlinear equations A number of entry level survey papers were solicited and a series of test problems has been collected in an appendix Most of the articles are accessible to students who have had a course in numerical analysis
