Proceedings of the 7th International Conference on Communications and Cyber Physical Engineering Amit Kumar, Stefan Mozar, 2025-11-18 This book includes peer reviewed high quality articles presented at the 7th International Conference on Communications and Cyber Physical Engineering ICCCE 2024 held on July 19 and 20 2024 at G Narayanamma Institute of Technology Science Hyderabad India ICCCE is one of the most prestigious conferences conceptualized in the field of networking and communication technology offering in depth information on the latest developments in voice data image and multimedia Discussing the latest developments in voice and data communication engineering cyber physical systems network science communication software image and multimedia processing research and applications as well as communication technologies and other related technologies it includes contributions from both academia and industry This book is a valuable resource for scientists research scholars and PG students working to formulate their research ideas and find the future directions in these areas Further it serves as a reference work to understand the latest engineering and technologies used by practicing engineers in the field of communication engineering

AI in the Classroom Ross Smith, Mayte Cubino, Emily McKeon, 2025-10-16 DESCRIPTION For thousands of years education has been shaped by technology from clay tablets and hornbooks to the printing press and now to digital learning platforms and remote education systems As artificial intelligence becomes more embedded in our daily lives its role in education continues to explode AI tools offer personalized instruction streamlined administrative tasks and enhanced student engagement creating a learning environment tailored to individual needs This book offers a guide to AI understanding and implementation in the classroom and how it makes personalized learning practical scalable and achievable for all Readers will understand how the advances in technology over time have led to improvements in education and how AI can enhance a personalized learning experience The authors go in depth to find the latest research to explore the implementation of AI strategies and technology in the classroom along with the critical and increasingly important focus on security privacy and ethical concerns By the end of this book the reader will have a robust understanding of AI and how it can help implement facilitate and augment personalized instruction strategies and techniques to support student learning and growth The future of education is here and it is intelligent adaptive and inspiring WHAT YOU WILL LEARN Leverage AI to personalize learning Prepare students for an AI integrated world Define a path for educators to navigate their professional development Clarify how this technology will influence administrators Gain insights into the ethical considerations of AI use How to communicate the benefits of AI to parents Enhance student engagement What to look out for to ensure student privacy WHO THIS BOOK IS FOR Written for educators administrators advanced students parents and policymakers looking to embrace the future of education This book

will empower educators and administrators to build an innovative and inclusive educational environment with the assistance of AI Parents will benefit through deepening their understanding of AI and how it guides students toward success

TABLE OF CONTENTS

Building Computer Vision Projects with OpenCV 4 and C++ David Millán Escrivá, Prateek Joshi, Vinícius G. Mendonça, Roy Shilkrot, 2019-03-26

Delve into practical computer vision and image processing projects and get up to speed with advanced object detection techniques and machine learning algorithms

Key Features

- Discover best practices for engineering and maintaining OpenCV projects
- Explore important deep learning tools for image classification
- Understand basic image matrix formats and filters

Book Description

OpenCV is one of the best open source libraries available and can help you focus on constructing complete projects on image processing motion detection and image segmentation

This Learning Path is your guide to understanding OpenCV concepts and algorithms through real world examples and activities

Through various projects you ll also discover how to use complex computer vision and machine learning algorithms and face detection to extract the maximum amount of information from images and videos

In later chapters you ll learn to enhance your videos and images with optical flow analysis and background subtraction

Sections in the Learning Path will help you get to grips with text segmentation and recognition in addition to guiding you through the basics of the new and improved deep learning modules

By the end of this Learning Path you will have mastered commonly used computer vision techniques to build OpenCV projects from scratch

This Learning Path includes content from the following Packt books

- Mastering OpenCV 4 Third Edition by Roy Shilkrot and David Mill n Escriv
- Learn OpenCV 4 By Building Projects Second Edition by David Mill n Escriv Vin cius G Mendon a and Prateek Joshi

What you will learn

- Stay up to date with algorithmic design approaches for complex computer vision tasks
- Work with OpenCV s most up to date API through various projects
- Understand 3D scene reconstruction and Structure from Motion SfM
- Study camera calibration and overlay augmented reality AR using the ArUco module
- Create CMake scripts to compile your C application
- Explore segmentation and feature extraction techniques
- Remove backgrounds from static scenes to identify moving objects for surveillance
- Work with new OpenCV functions to detect and recognize text with Tesseract

Who this book is for

If you are a software developer with a basic understanding of computer vision and image processing and want to develop interesting computer vision applications with OpenCV this Learning Path is for you

Prior knowledge of C and familiarity with mathematical concepts will help you better understand the concepts in this Learning Path

Machine Learning for OpenCV 4 Aditya Sharma, Vishwesh Ravi Shrimali, Michael Beyeler, 2019-09-06 A practical guide to understanding the core machine learning and deep learning algorithms and implementing them to create intelligent image processing systems using OpenCV 4 Key Features Gain insights into machine learning algorithms and implement them using OpenCV 4 and scikit learn Get up to speed with Intel OpenVINO and its integration with OpenCV 4 Implement high performance machine learning models with helpful tips and best practices

Book Description OpenCV is an opensource library for building computer vision apps The latest release OpenCV 4 offers a plethora of features and platform improvements that are covered comprehensively in this up to date second edition You ll start by understanding the new features and setting up OpenCV 4 to build your computer vision applications You will explore the fundamentals of machine learning and even learn to design different algorithms that can be used for image processing Gradually the book will take you through supervised and unsupervised machine learning You will gain hands on experience using scikit learn in Python for a variety of machine learning applications Later chapters will focus on different machine learning algorithms such as a decision tree support vector machines SVM and Bayesian learning and how they can be used for object detection computer vision operations You will then delve into deep learning and ensemble learning and discover their real world applications such as handwritten digit classification and gesture recognition Finally you ll get to

grips with the latest Intel OpenVINO for building an image processing system By the end of this book you will have developed the skills you need to use machine learning for building intelligent computer vision applications with OpenCV 4 What you will learn Understand the core machine learning concepts for image processing Explore the theory behind machine learning and deep learning algorithm design Discover effective techniques to train your deep learning models Evaluate machine learning models to improve the performance of your models Integrate algorithms such as support vector machines and Bayes classifier in your computer vision applications Use OpenVINO with OpenCV 4 to speed up model inference Who this book is for This book is for Computer Vision professionals machine learning developers or anyone who wants to learn machine learning algorithms and implement them using OpenCV 4 If you want to build real world Computer Vision and image processing applications powered by machine learning then this book is for you Working knowledge of Python programming is required to get the most out of this book

Building Computer Vision Applications Using Artificial Neural Networks Shamshad Ansari, 2023-12-30 Computer vision is constantly evolving and this book has been updated to reflect new topics that have emerged in the field since the first edition's publication All code used in the book has also been fully updated This second edition features new material covering image manipulation practices image segmentation feature extraction and object identification using real life scenarios to help reinforce each concept These topics are essential for building advanced computer vision applications and you'll gain a thorough understanding of them The book's source code has been updated from TensorFlow 1.x to 2.x and includes step by step examples using both OpenCV and TensorFlow with Python Upon completing this book you'll have the knowledge and skills to build your own computer vision applications using neural networks

What You Will Learn Understand image processing manipulation techniques and feature extraction methods Work with convolutional neural networks CNN single shot detector SSD and YOLO Utilize large scale model development and cloud infrastructure deployment Gain an overview of FaceNet neural network architecture and develop a facial recognition system

Who This Book Is For Those who possess a solid understanding of Python programming and wish to gain an understanding of computer vision and machine learning It will prove beneficial to data scientists deep learning experts and students

Mastering OpenCV 4 with Python Alberto Fernández Villán, 2019-03-29 Create advanced applications with Python and OpenCV exploring the potential of facial recognition machine learning deep learning web computing and augmented reality

Key Features Develop your computer vision skills by mastering algorithms in Open Source Computer Vision 4 OpenCV 4 and Python Apply machine learning and deep learning techniques with TensorFlow and Keras Discover the modern design patterns you should avoid when developing efficient computer vision applications

Book Description OpenCV is considered to be one of the best open source computer vision and machine learning software libraries It helps developers build complete projects in relation to image processing motion detection or image segmentation among many others OpenCV for Python enables you to run computer vision algorithms smoothly in real time combining the best of the OpenCV C API and

the Python language In this book you ll get started by setting up OpenCV and delving into the key concepts of computer vision You ll then proceed to study more advanced concepts and discover the full potential of OpenCV The book will also introduce you to the creation of advanced applications using Python and OpenCV enabling you to develop applications that include facial recognition target tracking or augmented reality Next you ll learn machine learning techniques and concepts understand how to apply them in real world examples and also explore their benefits including real time data production and faster data processing You ll also discover how to translate the functionality provided by OpenCV into optimized application code projects using Python bindings Toward the concluding chapters you ll explore the application of artificial intelligence and deep learning techniques using the popular Python libraries TensorFlow and Keras By the end of this book you ll be able to develop advanced computer vision applications to meet your customers demands What you will learn Handle files and images and explore various image processing techniques Explore image transformations including translation resizing and cropping Gain insights into building histograms Brush up on contour detection filtering and drawing Work with Augmented Reality to build marker based and markerless applications Work with the main machine learning algorithms in OpenCV Explore the deep learning Python libraries and OpenCV deep learning capabilities Create computer vision and deep learning web applications Who this book is for This book is designed for computer vision developers engineers and researchers who want to develop modern computer vision applications Basic experience of OpenCV and Python programming is a must

Learn OpenCV 4 by Building Projects David Millán Escrivá, Vinícius G. Mendonça, Prateek Joshi, 2018-11-30

Explore OpenCV 4 to create visually appealing cross platform computer vision applications Key Features Understand basic OpenCV 4 concepts and algorithms Grasp advanced OpenCV techniques such as 3D reconstruction machine learning and artificial neural networks Work with Tesseract OCR an open source library to recognize text in images Book Description OpenCV is one of the best open source libraries available and can help you focus on constructing complete projects on image processing motion detection and image segmentation Whether you re completely new to computer vision or have a basic understanding of its concepts Learn OpenCV 4 by Building Projects Second edition will be your guide to understanding OpenCV concepts and algorithms through real world examples and projects You ll begin with the installation of OpenCV and the basics of image processing Then you ll cover user interfaces and get deeper into image processing As you progress through the book you ll learn complex computer vision algorithms and explore machine learning and face detection The book then guides you in creating optical flow video analysis and background subtraction in complex scenes In the concluding chapters you ll also learn about text segmentation and recognition and understand the basics of the new and improved deep learning module By the end of this book you ll be familiar with the basics of Open CV such as matrix operations filters and histograms and you ll have mastered commonly used computer vision techniques to build OpenCV projects from scratch What you will learn Install OpenCV 4 on your operating system Create CMake scripts to compile your C application

Understand basic image matrix formats and filters Explore segmentation and feature extraction techniques Remove backgrounds from static scenes to identify moving objects for surveillance Employ various techniques to track objects in a live video Work with new OpenCV functions for text detection and recognition with Tesseract Get acquainted with important deep learning tools for image classification Who this book is for If you are a software developer with a basic understanding of computer vision and image processing and want to develop interesting computer vision applications with OpenCV Learn OpenCV 4 by Building Projects for you Prior knowledge of C will help you understand the concepts covered in this book

Learning OpenCV 3 Adrian Kaehler, Gary Bradski, 2016-12-14 Get started in the rapidly expanding field of computer vision with this practical guide Written by Adrian Kaehler and Gary Bradski creator of the open source OpenCV library this book provides a thorough introduction for developers academics roboticists and hobbyists You ll learn what it takes to build applications that enable computers to see and make decisions based on that data With over 500 functions that span many areas in vision OpenCV is used for commercial applications such as security medical imaging pattern and face recognition robotics and factory product inspection This book gives you a firm grounding in computer vision and OpenCV for building simple or sophisticated vision applications Hands on exercises in each chapter help you apply what you ve learned This volume covers the entire library in its modern C implementation including machine learning tools for computer vision Learn OpenCV data types array types and array operations Capture and store still and video images with HighGUI Transform images to stretch shrink warp remap and repair Explore pattern recognition including face detection Track objects and motion through the visual field Reconstruct 3D images from stereo vision Discover basic and advanced machine learning techniques in OpenCV

Selected Papers from the International Conference on Artificial Intelligence Ali Othman Albaji, 2026-01-01 The First International Conference on Generative AI Current Research Industry Trends and Innovations FICAI2025 proceedings will provide a comprehensive collection of the latest research and developments in the field of artificial intelligence with a particular focus on AI Generative AI The proceedings will encompass a wide range of topics including machine learning ethical AI and practical applications in sectors such as healthcare engineering and cybersecurity This collection aims to document the significant contributions of academic and industry researchers who are driving the advancement of AI technologies Each paper presents new methodologies theoretical frameworks or practical implementations of AI systems designed to solve real world problems With a global lineup of authors and contributors the FICAI2025 proceedings will also highlight case studies and the latest trends from across industries offering valuable insights for both AI researchers and professionals in the field

OpenCV 4 with Python Blueprints Dr. Menua Gevorgyan, Arsen Mamikonyan, Michael Beyeler, 2020-03-20 Get to grips with traditional computer vision algorithms and deep learning approaches and build real world applications with OpenCV and other machine learning frameworks Key Features Understand how to capture high quality image data detect and track objects and process the actions of animals or humans Implement

your learning in different areas of computer vision Explore advanced concepts in OpenCV such as machine learning artificial neural network and augmented reality

Book Description OpenCV is a native cross platform C library for computer vision machine learning and image processing It is increasingly being adopted in Python for development This book will get you hands on with a wide range of intermediate to advanced projects using the latest version of the framework and language OpenCV 4 and Python 3 8 instead of only covering the core concepts of OpenCV in theoretical lessons This updated second edition will guide you through working on independent hands on projects that focus on essential OpenCV concepts such as image processing object detection image manipulation object tracking and 3D scene reconstruction in addition to statistical learning and neural networks You ll begin with concepts such as image filters Kinect depth sensor and feature matching As you advance you ll not only get hands on with reconstructing and visualizing a scene in 3D but also learn to track visually salient objects The book will help you further build on your skills by demonstrating how to recognize traffic signs and emotions on faces Later you ll understand how to align images and detect and track objects using neural networks By the end of this OpenCV Python book you ll have gained hands on experience and become proficient at developing advanced computer vision apps according to specific business needs

What you will learn Generate real time visual effects using filters and image manipulation techniques such as dodging and burning Recognize hand gestures in real time and perform hand shape analysis based on the output of a Microsoft Kinect sensor Learn feature extraction and feature matching to track arbitrary objects of interest Reconstruct a 3D real world scene using 2D camera motion and camera reprojection techniques Detect faces using a cascade classifier and identify emotions in human faces using multilayer perceptrons Classify localize and detect objects with deep neural networks

Who this book is for This book is for intermediate level OpenCV users who are looking to enhance their skills by developing advanced applications Familiarity with OpenCV concepts and Python libraries and basic knowledge of the Python programming language are assumed

Unlocking Visual Insights OpenCV Made Simple and Powerful

KEY FEATURES OpenCV Mastery Harness the full potential of OpenCV Comprehensive Coverage From fundamentals to advanced techniques Practical Exercises Apply knowledge through hands on tasks

DESCRIPTION Mastering OpenCV with Python immerses you in the captivating realm of computer vision with a structured approach that equips you with the knowledge and skills essential for success in this rapidly evolving field From grasping the fundamental concepts of image processing and OpenCV to mastering advanced techniques such as neural networks and object detection you will gain a comprehensive understanding Each chapter is enriched with hands on exercises and real world projects ensuring the acquisition of practical skills that can be immediately applied in your professional journey This book not only elevates your technical proficiency but also prepares you for a rewarding career The technological job landscape is constantly evolving and professionals who can harness the potential of computer vision are in high demand By mastering the skills and insights contained within these pages you will be well prepared to explore exciting

career opportunities ranging from machine learning engineering to computer vision research This book is your ticket to a future filled with innovation and professional advancement within the dynamic world of computer vision

WHAT WILL YOU LEARN Master Image Processing and Machine Learning with OpenCV using advanced Tools and Libraries Create Real World Projects with Hands On Experience Explore Machine Learning for Computer Vision Develop Confidence in Practical Computer Vision Projects Conquer Real World Image Processing Challenges Apply Computer Vision Across Diverse Industries Boost Your Career in Computer Vision Become an Expert in Computer Vision for Career Advancement

WHO IS THIS BOOK FOR This beginner friendly book in computer vision requires no prior experience making it accessible to newcomers While a basic programming understanding is helpful it s designed to guide individuals from diverse backgrounds into the captivating realms of AI computer vision and image processing It s equally valuable for aspiring tech professionals students and enthusiasts seeking rewarding careers and knowledge in these cutting edge fields
