Consumer Search And Switching Behavior Evidence From The:

Consumer Behavior in the Internet Era Gong Sun, Lester Johnson, Jie Li, 2022-11-28 *Behavioral Consequences of Dynamic Pricing* David Prakash, 2022-08-19 Digital technologies are driving the application of dynamic pricing Today this pricing strategy is used not only for perishable products such as flights or hotel rooms but for almost any product or service category With dynamic pricing retailers frequently adjust their prices over time to respond to factors such as demand their supply and that of competitors or the time of sale Additionally dynamic pricing allows retailers to take advantage of a large share of consumers willingness to pay while avoiding losses from unsold products Ultimately this can lead to an increase in revenue and profit However the application of dynamic pricing comes with great challenges In addition to the technological implementation companies have to take into account that dynamic pricing can cause complex and unintended behavioral consequences on the consumer side The key objective of this dissertation is to provide a deeper understanding of the impact of dynamic pricing on consumer behavior To this end this dissertation presents insights from four perspectives First how reference prices as a critical component in purchase decisions are operationalized Second how customers search for products priced dynamically differentiated by business and private customers as well as by different devices used for the search Third whether and how dynamic pricing influences the impact of internal reference prices on purchase decisions Finally this dissertation demonstrates that consumers perceive price changes as personalized in different purchase contexts leading to reduced perceptions of fairness and undesirable behavioral consequences

Consumer Credit and the American Economy Thomas A. Durkin, Gregory E. Elliehausen, 2014

Consumer Credit and the American Economy examines the economics behavioral science sociology history institutions law and regulation of consumer credit in the United States After discussing the origins and various kinds of consumer credit available in today s marketplace this book reviews at some length the long run growth of consumer credit to explore the widely held belief that somehow consumer credit has risen too fast for too long It then turns to demand and supply with chapters discussing neoclassical theories of demand new behavioral economics and evidence on production costs and why consumer credit might seem expensive compared to some other kinds of credit like government finance This discussion includes review of the economics of risk management and funding sources as well discussion of the economic theory of why some people might be limited in their credit search the phenomenon of credit rationing This examination includes review of issues of risk management through mathematical methods of borrower screening known as credit scoring and financial market sources of funding for offerings of consumer credit The book then discusses technological change in credit granting It examines how modern automated information systems called credit reporting agencies or more popularly credit bureaus reduce the costs of information acquisition and permit greater credit availability at less cost This discussion is followed by examination of the logical offspring of technology the ubiquitous credit card that permits consumers access to both payments and credit services worldwide virtually instantly After a chapter on institutions that have arisen to supply credit to individuals for whom mainstream credit is often unavailable including payday loans and other small dollar sources of loans discussion turns to legal structure and the regulation of consumer credit There are separate chapters on the theories behind the two main thrusts of federal regulation to this point fairness for all and financial disclosure Following these chapters there is another on state regulation that has long focused on marketplace access and pricing Before a final concluding chapter another chapter focuses on two noncredit marketplace products that are closely related to credit The first of them debt protection including credit insurance and other forms of credit protection is economically a complement The second product consumer leasing is a substitute for credit use in many situations especially involving acquisition of automobiles This chapter is followed by a full review of consumer bankruptcy what happens in the worst of cases when consumers find themselves unable to repay their loans Because of the importance of consumer credit in consumers financial affairs the intended audience includes anyone interested in these issues not only specialists who spend much of their time focused on them For this reason the authors have carefully avoided academic jargon and the mathematics that is the modern language of economics It also examines the psychological sociological historical and especially legal traditions that go into fully understanding what has led to the demand for consumer credit and to what the markets and institutions that provide
