Functional Analysis Balmohan Vishnu Limaye, 1996 This Book Is An Introductory Text Written With Minimal Prerequisites The Plan Is To Impose A Distance Structure On A Linear Space Exploit It Fully And Then Introduce Additional Features Only When One Cannot Get Any Further Without Them The Book Naturally Falls Into Two Parts And Each Of Them Is Developed Independently Of The Other The First Part Deals With Normed Spaces Their Completeness And Continuous Linear Maps On Them Including The Theory Of Compact Operators The Much Shorter Second Part Treats Hilbert Spaces And Leads Upto The Spectral Theorem For Compact Self Adjoint Operators Four Appendices Point Out Areas Of Further Development Emphasis Is On Giving A Number Of Examples To Illustrate Abstract Concepts And On Citing Various Applications Of Results Proved In The Text In Addition To Proving Existence And Uniqueness Of A Solution Its Approximate Construction Is Indicated Problems Of Varying Degrees Of Difficulty Are Given At The End Of Each Section Their Statements Contain The Answers As Well

[Linear Functional Analysis for Scientists and Engineers](#) Balmohan V. Limaye, 2016-06-18 This book provides a concise and meticulous introduction to functional analysis Since the topic draws heavily on the interplay between the algebraic structure of a linear space and the distance structure of a metric space functional analysis is increasingly gaining the attention of not only mathematicians but also scientists and engineers The purpose of the text is to present the basic aspects of functional analysis to this varied audience keeping in mind the considerations of applicability A novelty of this book is the inclusion of a result by Zabrejko which states that every countably subadditive seminorm on a Banach space is continuous Several major theorems in functional analysis are easy consequences of this result The entire book can be used as a textbook for an introductory course in functional analysis without having to make any specific selection from the topics presented here Basic notions in the setting of a metric space are defined in terms of sequences These include total boundedness compactness continuity and uniform continuity Offering concise and to the point treatment of each topic in the framework of a normed space and of an inner product space the book represents a valuable resource for advanced undergraduate students in mathematics and will also appeal to graduate students and faculty in the natural sciences and engineering The book is accessible to anyone who is familiar with linear algebra and real analysis

Functional Analysis Markus Haase, 2014-09-17 This book introduces functional analysis at an elementary level without assuming any background in real analysis for example on metric spaces or Lebesgue integration It focuses on concepts and methods relevant in applied contexts such as variational methods on Hilbert spaces Neumann series eigenvalue expansions for compact self adjoint operators weak differentiation and Sobolev spaces on intervals and model applications to differential and integral equations Beyond that the final chapters on the uniform boundedness theorem the open mapping theorem and the Hahn Banach theorem provide a stepping stone to more advanced

texts The exposition is clear and rigorous featuring full and detailed proofs Many examples illustrate the new notions and results Each chapter concludes with a large collection of exercises some of which are referred to in the margin of the text tailor made in order to guide the student digesting the new material Optional sections and chapters supplement the mandatory parts and allow for modular teaching spanning from basic to honors track level

Spectral Computations for Bounded Operators Mario Ahues, Alain Largillier, Balmohan Limaye, 2001-02-26 Exact eigenvalues eigenvectors and principal vectors of operators with infinite dimensional ranges can rarely be found Therefore one must approximate such operators by finite rank operators then solve the original eigenvalue problem approximately Serving as both an outstanding text for graduate students and as a source of current results for
