GAS DYNAMICS, Seventh Edition RATHAKRISHNAN, E., 2020-07-01 This revised and updated seventh edition continues to provide the most accessible and readable approach to the study of all the vital topics and issues associated with gas dynamic processes At every stage the physics governing the process its applications and limitations are discussed in detail With a strong emphasis on the basic concepts and problem solving skills this text is suitable for a course on Gas Dynamics Compressible Flows High speed Aerodynamics at both undergraduate and postgraduate levels in aerospace engineering mechanical engineering chemical engineering and applied physics The elegant and concise style of the book along with illustrations and worked out

examples makes it eminently suitable for self study by students and also for scientists and engineers working in the field of gas dynamics in industries and research laboratories The computer program to calculate the coordinates of contoured nozzle with the method of characteristics has been given in C language The program listing along with a sample output is given in the Appendix NEW TO THE EDITION A new chapter on the Power of Compressible Bernoulli Equation Extra chapter end examples in Chapter 5 Additional exercise problems in Chapters 5 6 7 and 8 KEY FEATURES Concise coverage of the thermodynamic concepts to serve as a revision of the background material Introduction to measurements in compressible flows and optical flow visualization techniques Introduction to rarefied gas dynamics and high temperature gas dynamics Solutions Manual for instructors containing the complete worked out solutions to chapter end problems In depth presentation of potential equations for compressible flows similarity rule and two dimensional compressible flows Logical and systematic treatment of fundamental aspects of gas dynamics waves in the supersonic regime and gas dynamic processes TARGET AUDIENCE BE B Tech Mechanical Engineering Aeronautical Engineering ME M Tech Thermal Engineering Aeronautical Engineering *High Enthalpy Gas Dynamics* Ethirajan Rathakrishnan,2015-06-29 This is an introductory level textbook which explains the elements of high temperature and high speed gas dynamics written in a clear and easy to follow style the author covers all the latest developments in the field including basic thermodynamic principles compressible flow regimes and waves propagation in one volume covers theoretical modeling of High Enthalpy Flows with particular focus on problems in internal and external gas dynamic flows of interest in the fields of rockets propulsion and hypersonic aerodynamics High enthalpy gas dynamics is a compulsory course for aerospace engineering students and this book is a result of over 25 years teaching by the author accompanying website includes a Solutions Manual for exercises listed at the end of each chapter plus lecture slides Introduction to Compressible Fluid Flow Patrick H. Oosthuizen,William E. Carscallen,2013-07-22 Introduction to Compressible Fluid Flow Second Edition offers extensive coverage of the physical phenomena experienced in compressible flow Updated and revised the second edition provides a thorough explanation of the assumptions used in the analysis of compressible flows It develops in students an understanding of what causes compressible flows to differ from incompressible flows and how they can be analyzed This book also offers a strong foundation for more advanced and focused study The book begins with discussions of the analysis of isentropic flows of normal and oblique shock waves and of expansion waves The final chapters deal with nozzle characteristics friction effects heat exchange effects a hypersonic flow high temperature gas effects and low density flows This book applies real world applications and gives greater attention to the supporting software and its practical application Includes numerical results obtained using a modern commercial CFD computer fluid dynamics code to illustrate the type of results that can be obtained using such a code Replaces BASIC language programs with MATLAB routines Avails COMPROP2 software which readers can use to do compressible flow computation Additional problems have been added and non numerical problems illustrating practical

applications have been included A solutions manual that contains complete solutions to all of the problems in this book is available The manual incorporates the same problem solving methodology as adopted in the worked examples in this book It also provides summaries of the major equations developed in each chapter An interactive computer program also accompanies this book

Physical and Chemical Processes in Gas Dynamics G G Chernyi, Moscow State University S Macheret G Chernyi and S Losev, 2004 A decade ago Russian scientist Staly A Losev assembled top scientists from various Russian institutions at Moscow State University and invited them to pool their knowledge about the changes gases undergo in a variety of aerospace settings from combustion of rocket fuels to hypersonic flow paths to the exteriors of atmospheric reentry vehicles The work grew into the AVAGADRO Laboratory of Moscow State Universitys Institute of Mechanics The models and formulas produced by the team of authors are contained in the second edition of the text book **Physical and Chemical Processes in Gas Dynamics** The text provides a valuable window into the design philosophies and models that govern former Soviet engineers and scientists Normally these things are not accessible to U S engineers said Paul Zarchan of MITs Lincoln Laboratory Editor in Chief of AIAAs Progress in Astronautics and Aeronautics Series that includes this text Accompanying the book is the Russian produced Chemical Workbench software which is a user friendly Windows based interface for performing calculations based on the models of gas dynamics contained in the book The book and software provide concise exhaustive and clear descriptions of terms notations concepts methods laws and techniques It is invaluable for students and engineers who are determined to more accurately predict the physical and chemical processes in gas and plasma dynamics
