Fluid and Thermodynamics Kolumban Hutter, Yongqi Wang, 2016-07-18 In this book fluid mechanics and thermodynamics F T are approached as interwoven not disjoint fields The book starts by analyzing the creeping motion around spheres at rest Stokes flows the Oseen correction and the Lagerstrom Kaplun expansion theories are presented as is the homotopy analysis 3D creeping flows and rapid granular avalanches are treated in the context of the shallow flow approximation and it is demonstrated that uniqueness and stability deliver a natural transition to turbulence modeling at the zero first order closure level The difference quotient turbulence model DQTM closure scheme reveals the importance of the turbulent closure schemes non locality effects Thermodynamics is presented in the form of the first and second laws and irreversibility is expressed in terms of an entropy balance Explicit expressions for constitutive postulates are in conformity with the dissipation inequality Gas dynamics offer a first application of combined F T The book is rounded out by a chapter on dimensional analysis similitude and physical experiments [Concise Chemical Thermodynamics](#) A.P.H.
