The European Conference on Parallel Computing Euro Par is an international conference series dedicated to the promotion and advancement of all aspects of parallel and distributed computing. The major themes fall into the categories of hardware, software, algorithms, and applications. This year new and interesting topics were introduced like Peer to Peer Computing, Distributed Multimedia, stems, and Mobile and Ubiquitous Computing. For the first time we organized a Demo Session showing many challenging applications. The general objective of Euro Par is to provide a forum promoting the development of parallel and distributed computing both as an industrial technique and an academic discipline, extending the frontiers of both the state of the art and the state of the practice. The industrial importance of parallel and distributed computing is supported this year by a special Industrial Session as well as a vendors exhibition. This is particularly important as currently parallel and distributed computing is evolving into a globally important technology. The buzzword Grid Computing clearly expresses this move. In addition, the trend to a global world is clearly visible in this year's Euro Par. The main audience for and participants at Euro Par are researchers in academic departments, industrial organizations, and government laboratories. Euro Par aims to become the primary choice of such professionals for the presentation of new results in their specific areas. Euro Par has its own Internet domain with a permanent Web site where the history of the conference series is described: <http://www.euro-par.org>. The Euro Par conference series is sponsored by the Association for Computer Machinery (ACM) and the International Federation for Information Processing (IFIP).
