Lord of the Wings M. Eekhout, S. Wichers, 2016-03-10 Buildings are neither conceived nor realized by architects in a vacuum the architect forms part of a larger team of builders craftsmen engineers and other experts who join forces to bring together their diverse fields of knowledge This book describes the design and development of the building process for the wings at the Yitzhak Rabin Centre in Tel Aviv and demonstrates how collaborative building technical design and development can lead in an integrated and innovative but risky process to an extreme innovation an Octatube Moonshot The challenge posed by the Rabin Centre wings was to develop an entirely novel technology for constructing free form shells It is necessary for many disciplines to collaborate in such a process and these must be

coordinated throughout the entire process including all of its unforeseen and experimental stages. The results of the process then have to be integrated into one technical artifact that satisfies all requirements and delivers effective answers or compromises in all of its life phases: be that conceptual design, material design, detail design, engineering, production, assembly, installation, loading, behavior, functional use, as a building, meaning of the building, as an artifact, even as architecture, and in both its local and global context, in its meaning as an integral part of the building.

Product Experience Hendrik N. J. Schifferstein, Paul Hekkert, 2011-04-28. Product Experience brings together research that investigates how people experience products, durable, non-durable, or virtual. In contrast to other books, the present book takes a very broad, possibly all-inclusive perspective on how people experience products. It thereby bridges gaps between several areas within psychology: e.g. perception, cognition, emotion, and links these areas to more applied areas of science such as product design, human-computer interaction, and marketing. The field of product experience research will include some of the research from four areas: Arts, Ergonomics, Technology, and Marketing. Traditionally, each of these four fields seems to have a natural emphasis on the human, ergonomics, and marketing, the product, technology, or the experience, arts. However, to fully understand human product experience, we need to use different approaches and we need to build bridges between these various fields of expertise. Most comprehensive collection of psychological research behind product design and usability. Consistently addresses the 3 components of human product experience: the human, the product, and the experience. International contributions from experts in the field. *Delft Design Guide* Annemiek van Boeijen, Jaap Daalhuizen, Delft University of Technology, Faculty of Industrial Design Engineering, 2010.

Maker Education Meets Technology Education, 2023-09-04. In this book, two fields meet: Technology Education with its long history and Maker Education, a relative new shoot in the educational field. Both focus on learning through making and both value agency and motivation of learners. The purpose of this book is to understand and analyze the kind of informal and formal educational activities that take place under the umbrella of the Maker Movement and then relate this to the field of Technology Education to uncover what researchers, innovators, and teachers in this field can learn from the principles, ideas, and practices that are central to the Maker Movement and vice versa. The book contains two types of chapters. The first type is case study chapters that span from Mexico, China, Korea, Denmark, the Netherlands, to Kenya and from primary to tertiary level, showing a variety of good practices in maker education, including both formal and informal contexts. In the subsequent thematic chapters, dedicated authors have used the case studies to reflect on themes such as curriculum reform, social learning, materiality, spatial thinking, informal versus formal learning, as well as the sustainability of learning and relate what is happening in Maker Education with Technology Education to imagine possible futures for Maker Education.

Boland Jr., Fred Collopy, 2004-07-28. *Managing as Designing* explores the design attitude, a new focus for analysis and decision making for managers that draws

on examples of decision making and leadership in architecture art and design Based on a series of conference papers given at the opening of the Peter B Lewis Building designed by Frank Gehry at the Weatherhead School of Management Case Western Reserve University the book includes keynote speeches from Frank Gehry and Karl Weick The premise of this book is that managers should act not only as decision makers but also as designers Though decision and design are inextricably linked in management action managers and scholars have too long emphasized the decision face of management over the design face In a series of essays from a multitude of disciplines the authors develop a theory of the design attitude in contrast to the more traditionally accepted and practiced decision attitude The book will appeal primarily to scholars of management theory and organization strategy and managers with many contributions from a variety of academic backgrounds including architecture sociology design history choreography strategy economics music and accounting There is a potential for strong crossover appeal to these groups especially to those people and groups interested in design and product development
