*University of Virginia Magazine*, 1894      *Artificial Intelligence in Design '98* John S. Gero, Fay Sudweeks, 2012-12-06 The development of computational models of design founded on the artificial intelligence paradigm has provided an impetus for much of current design research As artificial intelligence has matured and developed new approaches so the impact of these new approaches on design research has been felt This can be seen in the way concepts from cognitive science has found their way into artificial intelligence and hence into design research And also in the way in which agent based systems are being incorporated into design systems In design research there is an increasing blurring between notions drawn from artificial intelligence and those drawn from cognitive science Whereas a number of years ago the focus was largely on

applying artificial intelligence to designing as an activity thus treating designing as a form of problem solving today we are seeing a much wider variety of conceptions of the role of artificial intelligence in helping to model and comprehend designing as a process Thus we see papers in this volume which have as their focus the development or implementation of frameworks for artificial intelligence in design attempting to determine a unique locus for these ideas We see papers which attempt to find foundations for the development of tools based on the artificial intelligence paradigm often the foundations come from cognitive studies of human designers
