Approaches to Arc Flash Hazard Mitigation in 600 Volt Power Systems Curtis Thomas Latzo, 2011 ABSTRACT Federal regulations have recognized that arc flash hazards are a critical source of potential injury As a consequence in order to work on some electrical equipment the energy source must be completely shut down However power distribution systems in mission critical facilities such as hospitals and data centers must sometimes remain energized while being maintained In recent years the Arc Flash Hazard Analysis has emerged as a power system tool that informs the qualified technician of the incident energy at the equipment to be maintained and recommends the proper protective equipment to wear Due to codes standards and historically acceptable design methods the Arc Flash Hazard is often higher and more dangerous than necessary This dissertation presents detailed methodology and proposes alternative strategies to be implemented at the design stage of 600 volt facility power distribution systems which will decrease the Arc Flash Hazard Exposure when compared to widely used code acceptable design strategies Software models have been developed for different locations throughout a power system These software model simulations will analyze the Arc Flash Hazard in a system designed with typical mainstream code acceptable methods The model will be changed to show implementation of arc flash mitigation techniques at the system design level The computer simulations after the mitigation techniques will show significant lowering of the Arc Flash Hazard Exposure Electrical Safety and Arc Flash Handbook Canadian Electricity Forum Inc, Randolph W. Hurst, Don Horne, 2005 *Generating Station Arc Flash Analysis* Daniel Prindle, 2010 Arc Flash Analysis Study in Industry Harna Elavarasu, 2010 Nowadays hazard that associated with arc flash incident is increasing every year by year The increasing of the incident has been brought to our attention This study proposed so that it can help the industries to eliminate or at least reduce those hazards Through the analysis of this project the limitation for the arc flash occurs will be proved through the stimulation of the short circuit calculation and the boundary calculation by using the ETAP software There are few steps that will be included which is data collection process develop single line diagram arcing short circuit calculations and also flash protection boundary calculations The workers in industries should take the harm of arc flash as a serious matter and be aware of arc flash The expected result from this project will be the limitation that will be gain in the end of this project The limitations of the protective boundary to control the arc flash in industries The limitations of the protective boundary from the result are also to control the usage of Personal Protective Equipment PPE For each distance form a system or work place there will be a certain suitable level of PPE The result will help to reduce harm and accident that happens in industries The analysis of this project basically will be based on industrial field where the data that used to do the analysis will be involving the industry site *Arc Flash Analysis* Daniel R. Potton, University of North Carolina at Charlotte. Department of Electrical and Computer Engineering, 2011 Electrical workers are exposed to arc flash hazards

that require equipment be de energized during maintenance periods This contributes to a significant loss of system functionality resulting in costly outages Industry standards and health and safety regulations require the implementation of arc flash analyses on electrical equipment however the standards are often equivocal in terminology and difficult to determine when to appropriately apply Arc flash analyses require the use of various parameters combined in complex calculations These exhaustive procedures make it nearly impossible to perform an accurate arc flash assessment in the field Qualified field personnel need to understand the contributing factors of an arc flash and available retrofit methods for reducing the associated incident energy This thesis investigates the underlying concepts of an arc flash and presents a concise method for performing the analysis on a desired system using the Cooper Bussmann Short Circuit Point to Point method as well as the IEEE 1584 standard An electrical system representative of a small industrial plant is modeled and simulated using Operation Technology Incorporated s ETAP Electrical Transient Analysis Program software To aid in the reduction of an arc flash s total incident energy several sensitive arc flash parameters are defined and with the use of Matlab modeled and examined with the intention of allowing field personnel to quickly and safely recognize methods for arc flash mitigation This thesis can inform field personnel entry level engineers and engineering students of the concepts and sensitive parameters associated with arc flash analyses
