

Behavior Rating Inventory of Executive Function, Second Edition (BRIEF-2)

Administered by: _____ Completed by: _____

The BRIEF-2 is a rating scale that assesses a child's executive functioning behavior in eight separate areas including: planning, organizing, initiating tasks, inhibiting impulses, emotional control, and flexibility and sustaining working memory. The executive functions are mental processes that direct one's thought, action, and emotion, particularly during active problem solving. T-scores at or above 65 should be considered as having potential clinical significance.

* T-scores between 65 and 69 are considered to be **moderately elevated**

** T-scores 70 and higher are considered **clinically significant**

Clinical Scales	Parent	Teacher	Teacher	Common Characteristics of High Scores
Behavior Regulation Index (BRI)				Captures the child's ability to regulate and monitor behavior effectively. Composed of the Inhibit and Self-Monitor scales.
Inhibit				Ability to not act on an impulse and stop one's behavior at an appropriate time.
Self-Monitoring Index (SMI)				Checking habits and self-monitoring. Represents the child's ability to regulate emotional responses and be alert and on guard for changes in environment, people, plans, or demands. Composed of the Shift and Emotional Control scales.
Shift				Ability to move flexibly from one situation or activity to another based on demands.
Emotional Control Index (ECI)				Ability to modulate emotional responses. Reflects the child's ability to control and manage negative processes and to problem solve effectively. Composed of the Inhibit, Working Memory, Plan/Organize, Task-Monitor, and Organization of Materials scales.
Inhibit				Initiation is the ability to begin a task or activity without being prompted to do so. Key aspects of initiation include the ability to independently generate ideas, responses, or problem-solving strategies. Initiation difficulties typically do not reflect non-compliance or distractibility in a specific task.
Working Memory				Working memory is the capacity to hold information in mind in order to complete a task, encode and store information, or generate goals. Working memory is essential for carrying out multistep activities, completing mental manipulations, such

Executive Functions and the Frontal Lobes Vicki Anderson, Rani Jacobs, Peter J. Anderson, 2010-10-18 This volume has as its primary aim the examination of issues concerning executive function and frontal lobe development While many texts have addressed these issues this is the first to do so within a specifically developmental framework This area of cognitive function has received increasing attention over the past decade and it is now established that the frontal lobes and associated executive functions are critical for efficient functioning in daily life It is also clear and of particular relevance to this text that these functions develop gradually through childhood and then

deteriorate during old age These developmental trajectories and the impact of any interruption to them are the focus of this volume
