Causal Models And Intelligent Data Management:

Causal Models and Intelligent Data Management Alex Gammerman, 2012-12-06 Data analysis and inference have traditionally been research areas of statistics However the need to electronically store manipulate and analyze large scale high dimensional data sets requires new methods and tools new types of databases new efficient algorithms new data structures etc in effect new computational methods This monograph presents new intelligent data management methods and tools such as the support vector machine and new results from the field of inference in particular of causal modeling In 11 well structured chapters leading experts map out the major tendencies and future directions of intelligent data analysis The book will become a valuable source of reference for researchers exploring the interdisciplinary area between statistics and computer science as well as for professionals applying advanced data analysis methods in industry and commerce Students and lecturers will find the book useful as an introduction to the area

Bayesian Nets and Causality: Philosophical and Computational Foundations Jon Williamson, 2005 Bayesian nets are used in artificial intelligence as a calculus for causal reasoning enabling machines to make predictions perform diagnoses take decisions and even to discover causal relationships This book brings together how to automate reasoning in artificial intelligence and the nature of causality and probability in philosophy

Holmes, 2008-09-10 Bayesian networks currently provide one of the most rapidly growing areas of research in computer science and statistics In compiling this volume we have brought together contributions from some of the most prestigious researchers in this field Each of the twelve chapters is self contained Both theoreticians and application scientists engineers

in the broad area of artificial intelligence will find this volume valuable It also provides a useful sourcebook for Graduate students since it shows the direction of current research

Causality Judea Pearl,2009-09-14 Causality offers the first comprehensive coverage of causal analysis in many sciences including recent advances using graphical methods Pearl presents a unified account of the probabilistic manipulative counterfactual and structural approaches to causation and devises simple mathematical tools for analyzing the relationships between causal connections statistical associations actions and observations The book will open the way for including causal analysis in the standard curriculum of statistics artificial intelligence

A Guided Tour of Artificial Intelligence Research Pierre Marquis,Odile Papini,Henri Prade,2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI

Implementing reasoning or decision making processes requires an appropriate representation of the pieces of information to be exploited This first volume starts with a historical chapter sketching the slow emergence of building blocks of AI along centuries Then the volume provides an organized overview of different logical numerical or graphical representation formalisms able to handle incomplete information rules having exceptions probabilistic and possibilistic uncertainty and beyond as well as taxonomies time space preferences norms causality and even trust and emotions among agents Different types of reasoning beyond classical deduction are surveyed including nonmonotonic reasoning belief revision updating information fusion reasoning based on similarity case based interpolative or analogical as well as reasoning about actions reasoning about ontologies description logics argumentation and negotiation or persuasion between agents Three chapters deal with decision making be it multiple criteria collective or under uncertainty Two chapters cover statistical computational learning and reinforcement learning other machine learning topics are covered in Volume 2 Chapters on diagnosis and supervision validation and explanation and knowledge base acquisition complete the volume

Uncertainty in Artificial Intelligence Gregory Floyd Cooper,1999 This volume contains papers accepted for presentation at the Fifteenth Conference on Uncertainty in Artificial Intelligence UAI99 held at the Royal Institute of Technology KTH in Stockholm Sweden from July 30 through August 1 1999 This conference continues a 15 year tradition of providing an international

forum for exchange of ideas on problems of reasoning under uncertainty During those 15 years UAI has moved from a little noticed niche at the edge of the field solidly into the mainstream of artificial intelligence research and practice Research first presented at UAI has contributed significantly to advances in a number of related fields and has found application in a wide variety of domains The UAI conference has acquired a reputation for excellence and the proceedings have become an important reference source for high quality work in the field American Book Publishing Record ,1999 **Computation, Causation, and Discovery** Clark N. Glymour, Gregory Floyd Cooper, 1999 In science business and policymaking anywhere data are used in prediction two sorts of problems requiring very different methods of analysis often arise The first problems of recognition and classification concerns learning how to use some features of a system to accurately predict other features of that system The second problems of causal discovery concerns learning how to predict those changes to some features of a system that will result if an intervention changes other features This book is about the second much more difficult type of problem Typical problems of causal discovery are How will a change in commission rates affect the total sales of a company How will a reduction in cigarette smoking among older smokers affect their life expectancy How will a change in the formula a college uses to award scholarships affect its dropout rate These sorts of changes are interventions that directly alter some features of the system and perhaps and this is the question indirectly alter others The contributors discuss recent research and applications using Bayes nets or directed graphic representations including representations of feedback or recursive systems The book contains a thorough discussion of foundational issues algorithms proof techniques and applications to economics physics biology educational research and other areas **A Planning Methodology for Intelligent Urban Transportation Systems** Adib K.
