

Cell Reproduction Worksheet

Name _____

Section A: Why must a cell divide?

Cells are limited in size because the membrane must transport materials to the inside of the cell. As a cell gets bigger, the outside is unable to keep up with the inside, because the inside grows at a faster rate than the outside. As cells get larger, the surface to volume ratio gets smaller, meaning the cell membrane cannot supply the inside with what it needs to survive. Cell division occurs so multicellular organisms can grow and repair damaged tissue. In multicellular organisms, division occurs to produce egg and sperm for reproduction. In unicellular organisms, division is needed to reproduce the organism.

- In multicellular organisms, why do cells need to divide? _____

Section B: Vocabulary

- Define diploid. _____

- The data table shows the number of chromosomes for somatic cells.

- Chromosome # for diploid human cell? _____
- Chromosome # for haploid pea plant? _____
- Chromosome # for dog gamete? _____
- Chromosome # for diploid frog cell? _____
- If a frog cell had 26 chromosomes, then the cell is diploid or haploid.
- If a mosquito cell had 3 chromosomes, then it would be a gamete or somatic cell.
