

Chapter 10 Lab: From DNA to Protein Synthesis

Pre-lab

What percentage of total cell protein is protein?

Background

Genetic proteins are the main structural components of living cells. In addition, they also are involved in metabolism and reproduction and other "life" functions. The specific sequence of amino acids in the protein is determined by the sequence of nucleotides in the DNA. The amino acids are joined together by peptide bonds to form a polypeptide chain. The sequence of amino acids in the polypeptide chain determines the structure and function of the protein.

Explain how you will determine the sequence of amino acids in a protein.

Lab Procedure

1. Preparation of Protein

1.1. Preparation of Protein

1. Weigh out 1.0000 g of protein and add water to make 10.0000 mL.

The amino acid composition was analyzed using a protein sequencer. The amino acid composition was determined by the following procedure:

2. Compare your results with the amino acid composition of the protein.

What are the differences in the amino acid composition?

3. Explain the differences in the amino acid composition. What is the reason for the differences?
