The Baby Boom

Directions: Read the paragraphs below and study the graph carefully. Then answer the questions that follow.

The term *Baby Boom* refers to the years 1946 to 1964 when the population of the United States increased due to a dramatic postwar increase in the general birthrate. The birthrate had been declining steadily for decades, falling below 20 births per 1,000 people for the first time in 1924. In 1941, however, the rate leapt right back up to 28 and stayed above that figure through 1964.

At the height of the Baby Boom, from 1954 to

1961, more than 4 million babies were born in the United States every year. Many women who might have started children at other times decided to have children. This coincides with almost the "pre-adolescent era" that characterized the period. "These often childless women children were an unbalanced and emotional minority. It is not surprising children) was almost evidence of a physical or mental deficiency."
