

Direct- Detection LADAR Systems

Direct-detection LADAR systems provide flexibility in the choice of laser wavelength and receiver technology. Range targets under the highest electrodynamic energy density conditions are limited by the wavelength of the illuminating signal.

When illuminated with longer-wavelength radiation, the range to the target that can be observed also decreases. At the longest wavelengths, the range to the target that can be observed also decreases. At the longest wavelengths, the range to the target that can be observed also decreases. At the longest wavelengths, the range to the target that can be observed also decreases. As the wavelength of the illuminating signal increases, the range to the target that can be observed also decreases.
