Evolution, Morality and the Fabric of Society R. Paul Thompson, 2022-05-19 Recent interest in the evolution of the social contract is extended by providing a thoroughly naturalistic evolutionary account of the biological underpinnings of a social contract theory of morality This social contract theory of morality contractevolism provides an evolutionary justification of the primacy of a moral principle of maximisation of the opportunities for evolutionary reproductive success ERS where maximising opportunities does not entail an obligation on individuals to choose to maximise their ERS From that primary principle the moral principles of inclusion individual sovereignty liberty and equality can be derived The implications of these principles within contractevolism are explored through an examination of patriarchy individual sovereignty and copulatory choices and overpopulation and extinction Contractevolism is grounded in evolutionary dynamics that resulted in humans and human societies The most important behavioural consequences of evolution to contractevolism are reciprocity cooperation empathy and the most important cognitive consequences are reason and behavioural modification *How*

P. Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. Gauger, Wayne Grudem, 2017-11-15 Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life They argue that God used albeit in an undetectable way evolutionary mechanisms to produce all forms of life Featuring two dozen highly credentialed scientists philosophers and theologians from Europe and North America this volume contests this proposal documenting evidential logical and theological problems with theistic evolution making it the most comprehensive critique of theistic evolution yet produced *Evolution*, 2001 **Fine Books & Collections**, 2006 **The**

Vital Question Nick Lane, 2016-07-22 One of the deepest most illuminating books about the history of life to have been

published in recent years *The Economist* The Earth teems with life in its oceans forests skies and cities Yet there s a black hole at the heart of biology We do not know why complex life is the way it is or for that matter how life first began In *The Vital Question* award winning author and biochemist Nick Lane radically reframes evolutionary history putting forward a solution to conundrums that have puzzled generations of scientists For two and a half billion years from the very origins of life single celled organisms such as bacteria evolved without changing their basic form Then on just one occasion in four billion years they made the jump to complexity All complex life from mushrooms to man shares puzzling features such as sex which are unknown in bacteria How and why did this radical transformation happen The answer Lane argues lies in energy all life on Earth lives off a voltage with the strength of a lightning bolt Building on the pillars of evolutionary theory Lane s hypothesis draws on cutting edge research into the link between energy and cell biology in order to deliver a compelling account of evolution from the very origins of life to the emergence of multicellular organisms while offering deep insights into our own lives and deaths Both rigorous and enchanting *The Vital Question* provides a solution to life s vital question why are we as we are and indeed why are we here at all
