humans actual behavior deviates from the ideal of economic rationality due to at least two reasons first decisions are usually based on an incomplete information basis and second the information processing of human beings is limited by their computational capacities Due to these limitations people are forced to apply simple heuristics in information processing Our aim is to analyze the relevance of simple heuristics in the context of foreign exchange markets In our view the decision situation in foreign exchange markets can serve as a prime example for decision situations in which simple heuristics are especially relevant as the complexity of the decision situation is very high
