

## LED Intensity Measurement (Case Study)

### Challenge

In a recent application our customers needed to test LEDs in commercial fixture systems. The fixture light consisted of an array of 120 light points and LEDs. The fixture light operated in a high-intensity mode called "stage mode" and a low-intensity mode called "ball mode".

When the LEDs were in "stage mode" their measurement system would activate.

In order to commission this, several dummy filters were used to reduce the LED intensity to a level acceptable to the test system. However, when operated in "ball mode", the activation of the control timing filter caused instability in the measurement of LED colour and intensity.

### Solution

The solution was to use the Flux LED Analyser in conjunction with Flux Optical

Studio. The Flux LED Analyser has an extremely wide dynamic range which allows it to test LEDs from the dimmest LED to the brightest LED, without the use of any external optical attenuators or filters (at least 200 lumens). The Flux DMF LED Analyser was connected together in a daisy chain configuration in order to test 120 LEDs simultaneously.

In this particular case the customer opted to use the XP chromaticity and intensity outputs from the Flux LED Analyser. Flux provided a comprehensive suite of software tools which allowed us adjust the Flux LED Analyser after it was fixed in the test fixture. This allowed that each filter was measuring the correct intensity and colour. By using the most advanced colour technology it was possible to achieve a repeatability of  $\pm 0.0001$  in CIE x and y chromaticity and a repeatability of  $\pm 1%$  in terms of intensity measurements with a linear relation between it and ball mode.

One of the biggest challenges when setting up this test fixture was determining the test filter to use. It was decided that the best method was to test a large quantity of PCBs and using the measurement to calculate the mean and standard deviation of each filter position. Two filters were determined using the mean values as measured by the Flux LED Analyser and the MinMax software were derived from the relevant LED data sheet.

In order to ensure that the LEDs were chromaticity stable the LEDs were pre-warmed for a fixed time before any measurement was made.

### Result

Using the Flux balancing software it was then possible to adjust the mean intensity value of each filter to compensate for any fixture variations. A golden thread (chromaticity thread) was created and the measured value for each filter was stored. This thread was then used to verify the test fixture each day to ensure that there was no drift in the test results.

After drying of the test fixture the test time was approximately 1.5 seconds for the high intensity test and 1.0 seconds for the low intensity test of all 120 LEDs. The customer reported a new operational regime from the Flux LED Analyser in terms of both colour and intensity measurement. See Flux Case Study below.

**Hamburg, a global city? A case study on Hamburg's producer services and cultural industries** Anna-Lena Prüser, 2018-11-15 Bachelor Thesis from the year 2015 in the subject Geography Earth Science Economic Geography grade 1 3 University of Twente language English abstract This bachelor thesis examines a city's interlinkage in the globalizing processes and aims at answering the research question To what extent can Hamburg be qualified as a Global City in terms of its localization of global producer services and cultural industries Global cities are defined as local nodes of the corporate service sector and the cultural economy which are associated in a global network Following this an in depth analysis of Hamburg's performance on the economic and cultural dimension will be provided in order to clarify its global city status It will be innovative in two respects Firstly it will provide an incorporation of both dimensions economic and culture into its analysis in order to provide a more comprehensive and less biased estimate of a metropolis global city status a practice that has not been conducted in the literature so far Secondly it will apply this dualistic approach to the city of Hamburg Even though it is the second largest city in Germany according to population numbers Hamburg has not yet been subject of detailed investigation by global city researcher In a SWOT analysis the strengths weaknesses opportunities and threats of the producer service sector and the cultural economy are outlined in order to determine their basic situation the sectors integration in the global networks are discussed mainly on basis of the Globalization and World Cities Studies Research Network GaWC dataset and the data generated by Kratke 2010 By linking the local conditions with the global perspective on both sectors the not fully developed functional status of Hamburg as a global city becomes clear it is a global city in the second row Derived from this finding recommendations for a better involvement in the global networks are provided
