Intergenerational Learning in Practice Margaret Kernan, Giulia Cortellesi, 2019-10-31 Based on innovative global practice Intergenerational Learning in Practice presents a unique contribution to the field of intergenerational learning Drawing on the Together Old and Young TOY programme this book provides a comprehensive background to intergenerational learning along with tools and resources to help develop and improve your own intergenerational practice Experienced international authors from Europe North America and Australia provide a broad array of perspectives on intergenerational learning ranging from pedagogy to planning and community development and cover topics including The context theory and existing research behind intergenerational learning The changing relationships between young children and older adults Building communities and services for all ages Managing everyday encounters in public spaces between young and old Ensuring quality in intergenerational practice Insights on how intergenerational learning challenges discrimination Intergenerational Learning in Practice is a valuable resource for practitioners and leaders in Early Childhood Education and Care and those working in primary schools as well as professionals caring for older adults and those working in community development

Experimental Design S.N. Deming, S.L. Morgan, 1987-01-01 Now available in a paperback edition is a book which has been described as an exceptionally lucid easy to read presentation would be an excellent addition to the collection of every analytical chemist I recommend it with great enthusiasm Analytical Chemistry Unlike most current textbooks it approaches experimental design from the point of view of the experimenter rather than that of the statistician As the reviewer in Analytical Chemistry went on to say Deming and Morgan should be given high praise for bringing the principles of experimental design to the level of the practicing analytical chemist The book first introduces the reader to the fundamentals of experimental design Systems theory response surface concepts and basic statistics serve as a basis for the further development of matrix least squares and hypothesis testing The effects of different experimental designs and different models on the variance covariance matrix and on the analysis of variance ANOVA are extensively discussed Applications and advanced topics such as confidence bands rotatability and confounding complete the text Numerous worked examples are presented The clear and practical approach adopted by the authors makes the book applicable to a wide audience It will appeal particularly to those with a practical need scientists engineers managers research workers who have completed their formal education but who still need to know efficient ways of carrying out experiments It will also be an ideal text for advanced undergraduate and graduate students following courses in chemometrics data acquisition and treatment and design of experiments
