Statistical Methods John Delane Williams, 1996 This book covers introductory statistical methods for the social and behavioral sciences from a linear models perspective. The author argues that the research methodologies found in the social sciences and human studies are not inferior to those found in the physical sciences. He therefore provides methodologies that can be used in almost any field. The diversity of examples in this book helps students to broaden their scope and understanding of statistics. This book is a highly appropriate text for upper division undergraduate courses in beginning statistics or graduate level courses in the social and behavioral sciences including education.
