Mental Measurements Yearbook of the School of Education, Rutgers University ,1998 *Mental Health, Epidemiology and Machine Learning* Marcos Del Pozo Banos, Robert Stewart, Ann John, 2025-01-23 Mental health disorders are underlain by a wide diversity of influencing factors and they exert their impact across multiple domains in a patient s life As such mental health research has greatly benefited from the proliferation of large and diverse databanks with many and new types of data often covering a large sample of or even whole populations However traditional epidemiological and statistical techniques have proven to be insufficient to tackle the complexity of mental illness While such data have spurred important advances in the area of mental health they have also introduced new limitations that risk stalling progress In this context machine learning provides in theory novel opportunities to leverage the potential of databanks and propel population mental health

research forward Indeed after a slower introduction compared to other health specialties the popularity of machine learning in this field has soared in recent years Unfortunately on many occasions the use of machine learning has overshadowed epidemiological practice thus limiting the production of results that have genuine clinical relevance Without careful integration there is a real risk of losing the trust and confidence that machine learning has slowly gained within the clinical field
