

What is jBPM?

jBPM is a flexible Business Process Management (BPM) Suite. It makes the bridge between business analysts and developers. Traditional BPM engines have a focus that is limited to non-technical people only. jBPM has a dual focus: it offers process management features in a way that both business users and developers like it.

What does jBPM do?

A business process allows you to model your business goals by describing the steps that need to be executed to achieve that goal and the order, using a flow chart. This greatly improves the visibility and agility of your business logic, results in higher-level and domain-specific representations that can be understood by business users and is easier to monitor.

The core of jBPM is a light-weight, extensible workflow engine written in pure Java that allows you to execute business processes using the latest BPMN 2.0 specification. It can run in any Java environment, embedded in your application or as a service.

On top of the core engine, a lot of features and tools are offered to support business processes throughout their entire life cycle:

- Eclipse-based and web-based editor to support the graphical creation of your business processes (drag & drop).
- Pluggable persistence and transactions based on JPA / JTA.
- Pluggable human task service based on WS-HumanTask for including tasks that need to be performed by human actors.
- Management console supporting process instance management, task lists and task form management, and reporting.
- Optional process repository to deploy your process (and other related knowledge).
- History logging (for querying / monitoring / analysis).
- Integration with Seam, Spring, OSGi, etc.

jBPM makes the bridge between business analysts, developers and end users, by offering process management features and tools in a way that both business users and developers like it. Domain-specific nodes can be plugged into the palette, making the processes more easily understood by business users.

jBPM supports adaptive and dynamic processes that require flexibility to model complex, real-life situations that cannot easily be described using a rigid process. We bring control back to the end users by allowing them to control which parts of the process should be executed, to dynamically deviate from the process, etc.

jBPM is also not just an isolated process engine. Complex business logic can be modeled as a combination of business processes with business rules and complex event processing. jBPM can be combined with the Drools project to support one unified environment that integrates these paradigms where you model your business logic as a combination of processes, rules and events.

Modern Business Process Automation Arthur H. M. ter Hofstede, Wil M. P. van der Aalst, Michael Adams, Nick Russell, 2009-11-18

The field of Business Process Management (BPM) is marred by a seemingly endless sequence of proposed industry standards Contrary to other fields e.g. civil or electronic engineering these standards are not the result of a widely supported consolidation of well understood and well established concepts and practices In the BPM domain it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field Despite the initial fervor associated with such standardization activities it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings Moreover the results of the standardization processes themselves are a concern BPM standards tend to deal with complex concepts yet they are never properly defined and all too often not informed by established research The result is a plethora of languages and tools with no consensus on concepts and their implementation They also fail to provide clear direction in the way in which BPM standards should evolve One can also observe a dichotomy

between the business side of BPM and its technical side While it is clear that the application of BPM will fail if not placed in a proper business context it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust

Delivering the Customer-centric Organization
Layna Fischer, 2012-01-01 Customer centric organizations are concerned about shrinking volumes of business stiffer competition and ever more demanding consumer expectations which have increased pressure on the bottom line The ability to successfully manage the customer value chain across the life cycle of a customer is the key to the survival of any company today Business processes must react to changing and diverse customer needs and interactions to ensure efficient and effective outcomes This important book looks at the shifting nature of consumers and the workplace and how BPM and associated emergent technologies will play a part in shaping the companies of the future BPM s promises are real but the path to success is littered with pitfalls and shortcuts to failure Best practices can help you avoid them If you are

just embarking on using its methods and tools these authors have a wealth of experience to learn from and build on Whether you are a business manager or an Information Technology practitioner this special collection will provide valuable information about what BPM can do for you and how to apply it
