Part I – Multiple Choice: Circle the letter of the best answer on your answer sheet

1. A phone-in poll conducted by a newspaper reported that 73% of those who called in liked business tycoon Donald Trump. The number 73% is a
   a statistic.
   b sample.
   c parameter.
   d population.

2. The sampling distribution of a statistic is
   a the probability that we obtain the statistic in repeated random samples.
   b the mechanism that determines whether randomization was effective.
   c the distribution of values taken by a statistic in all possible samples of the same size from the same population.
   d the extent to which the sample results differ systematically from the truth.

3. A statistic is said to be unbiased if
   a the survey used to obtain the statistic was designed so as to avoid even the hint of racial or sexual prejudice.
   b the mean of its sampling distribution is equal to the true value of the parameter being estimated.
   c both the person who calculated the statistic and the subjects whose responses make up the statistic were truthful.
   d it is used for only honest purposes.

4. A simple random sample of 50 undergraduates at Johns Hopkins University found that 60% of those sampled felt that drinking was a problem among college students. A simple random sample of 50 undergraduates at Ohio State University found that 70% felt that drinking was a problem among college students. The number of undergraduates at Johns Hopkins University is approximately 2000, while the number at Ohio State is approximately 40,000. We conclude that
   a the sample from Johns Hopkins has much less variability than that from Ohio State.
   b the sample from Johns Hopkins has much more variability than that from Ohio State.
   c the sample from Johns Hopkins has almost the same variability as that from Ohio State.
   d it is impossible to make any statements about the variability of the two samples since the students surveyed were different.
