Ball,1995-10-30 The papers in this volume consider a general area of study known as network routing The underlying problems are conceptually simple yet mathematically complex and challenging

How can we best route material or people from one place to another Or how can we best design a system for instance locate facilities to provide services and goods as efficiently and equitably as possible The problems encountered in answering these questions often have an underlying combinatorial structure for example either we dispatch a vehicle or we do not or we use one particular route or another The problems also typically have an underlying network structure a communication or transportation network In addition models for these problems are often very large with hundreds or thousands of constraints and variables A companion volume in the Handbook series entitled Network Models treats basic network models such as minimum cost flows matching and the travelling salesman problem as well as several complex network topics not directly related to routing such as network design and network reliability   *Arc Routing : Problems, Applications and Algorithms* Horst A.     Introduction to Logistics Systems Planning and Control Gianpaolo Ghiani,Gilbert Laporte,Roberto Musmanno,2004-01-26 Publisher Description   An Integrated Systems Approach to the Development of Winter Maintenance ,2006 Winter road maintenance operations require many complex strategic and operational planning decisions The five primary problems involved in this intricate planning procedure include locating depots designing sectors routing service vehicles scheduling vehicles and configuring the vehicle fleet The complexity involved in each of these decisions has resulted mainly in research that approaches each of the problems separately and sequentially which can lead to isolated and suboptimal solutions After discussing the complexity of the relaxed subproblems that would need to be solved to optimize the intricate winter maintenance operations the research turns to a heuristic approach to more feasibly address the interrelated problems This report subsequently presents a systematic heuristic based optimization approach to integrate the winter road maintenance planning decisions for depot location sector design vehicle route design vehicle scheduling and fleet configuration The approach presented is illustrated through an example of public sector winter road maintenance planning for a rural transportation network in Boone County Missouri When applied to the real world winter road maintenance planning problems for Boone County the methodology delivered very promising results The solution methodology successfully achieves the objective of a more integrated and less sequential approach to the problems considered The integrated solution would allow the Missouri Department of Transportation MoDOT to maintain the same high level of service with significantly fewerresources The results indicate that this methodology is a successful step towards solving realistic multiple depot problems involving heterogeneous winter maintenance fleets   **INFOR.** ,2005   **Modeling and Control in Environmental Issues 2001** Akira Sano,S.
