Human resource management in the COVID-19 era: New insights and management opportunities Gonzalo Sanchez-Gardey, Caterina Francesca Gozzoli, Diletta Gazzaroli, Natalia Garcia-Carbonell, 2023-05-11 *Reinventing Manufacturing and Business Processes Through Artificial Intelligence* Geeta Rana, Alex Khang, Ravindra Sharma, Alok Kumar Goel, Ashok Kumar Dubey, 2021-12-14 This edited book describes how newly emerging Artificial Intelligence AI technologies will provide unprecedented opportunities to penetrate technology and automation into everything we do and at the same time provide a huge playing field for businesses to develop newer models to capture market share It establishes a milestone in understanding global transformational changes occurring in the manufacturing and corporate world due to AI and tries to find powerful and sophisticated solutions that will improve and streamline operations Reinventing Manufacturing and Business Processes Through Artificial Intelligence will be of interest to students researchers and professionals of the AI community as well as interdisciplinary researchers *Artificial Intelligence Suitability. Assessment of Manufacturing-Execution-System Functions* Yasin Sengöz, 2020-09-01 Master s Thesis from the year 2020 in the subject Computer Sciences Artificial Intelligence grade 2 0 J nk ping International Business School School of Engineering course Final Project Work in Production Systems language English abstract The thesis work introduces an assessment framework consisting of decisive criteria and related indicators which describe qualitatively the suitability of AI for MES functions based on three criteria with related indicators In addition the researcher displays furthermore how the developed assessment framework can be used in order to assess the MES functions regarding their AI readiness In order to cope the findings through the thesis work an inductive research approach has been applied Existing literature in the fields of intelligent manufacturing Manufacturing Execution Systems machine learning deep learning intelligent manufacturing digital twin and assessment methodologies have been extensively studied in order to base the theoretical developed framework on grounded theory A case study was carried out in order to test the validity and reliability of the developed assessment framework for industry The outcome of this thesis work was an assessment framework consisting of decisive criteria and related indicators when evaluating a MES function in respect to its AI suitability Furthermore an assessment checklist has been provided for the industry in order to be able to assess a MES function regards AI support in a quick and pragmatic manner To generate a more generalizable assessment framework criteria and indicators have to be adapted likewise testing the outcome of analogue and digital assessment methodologies will provide material for future studies Artificial Intelligence arises in the manufacturing field very rapidly Implementing Artificial Intelligence AI solutions and algorithms in the manufacturing environment is a well known research field in academia On the other hand Manufacturing Execution System MES providers

do not have a theoretical and pragmatic framework regarding the evaluation of MES functions in respect to their suitability for Artificial Intelligence In order to be able to pre evaluate whether a MES function shall be AI supported an intense literature research has been conducted Academia shows few investigations regarding this field of research Recent studies have been concerning about possible applications for MES functions in combination with AI However there is a lack of research in terms of pre evaluating a MES function before embedding the function with AI support since the development of AI solutions for MES functions without pre evaluating those bears a waste of valuable resources

Why Management Fails. How Organizations Function and How to Impact Them ,2021-11-23 Master s Thesis from the year 2020 in the subject Business economics Business Management Corporate Governance grade 1 Otto Beisheim School of Management Vallendar Kellogg WHU Executive MBA language English abstract Despite innovations in management science leaders struggle to adapt their organizations against rapid environmental changes Based on the assumption that this struggle results from obsolete management paradigms this work aims to outline a systemic view of organizations and groups as well as approaches to manage and change them This work adopts a fundamental question What dynamics evolve in organizations and groups or teams as a significant part of organizations that increase or decrease management s influence and the organizations or groups ability to induce change This work delivers a systematic approach to equip readers with analytical tools to arrive at their own understanding of a wide range of different organizations or groups This literature based work describes causal and systemic theories to explain human behavior based on an analysis of organizations based on systems theory Looking through different lenses provides insights into organizations underlying structures namely the machine game or fa ade metaphors Formal and informal structures and their interactions have been analyzed in different lifecycle stages immobility and replaceability The construction of a systemic view of groups shows group specific dynamics and behavioral patterns The specialization in groups drives local best practices expected informal behavior and a narrowed perspective of what is essential for the department or organization These local rationalities are critical to leading groups or organizations The explanations of groups and organizations clarify that a hierarchical understanding or an understanding that an organization or even its culture can be rationally planned is misleading Organizations continually adjust to changing conditions in their environment but unfortunately not as their executives intend Therefore the change of organizations or groups is hypothesis driven experimentation that integrates the change of the change from the beginning Systemic interventions are based on observations and do not claim predictability The manager s primary tasks are to develop team reflexivity and autonomous decision making as well as increase variation and promote selections in the group or organization Incremental approaches to

management group reflection and development and lateral and formal mechanisms of influence must be utilized in combination with a comprehensive organizational analysis

Artificial Intelligence vs Administrative Intelligence? Hortense Fricker, 2021-01-12 Master's Thesis from the year 2020 in the subject Organisation and administration Public administration grade 1 1 Free University of Berlin Otto Suhr Institut language English abstract The paper is divided in two main parts The first part introduces the agency theory and its application to two relevant aspects the agency theory in the public sector and the agency theory involving artificial agents The second part aims at providing answers to the research questions by discussing the changes in the agency of the public administrations as well as the changes in the control methods used to monitor these administrations Finally the conclusion summarizes the answer to the research questions exposes the implications and limits of this paper and offers leads for possible future research on this topic

Automated decision making ADM a type of algorithm which supports decision making and combines advanced analytics and data mining to make predictions has been developed in various public sector fields from predictive policing to healthcare and is increasingly helping public agents by delivering analysis that they can leverage to make their decisions This technique involves three main stakeholders the programmer of the algorithmic system the user who is the public agent operating the ADM system and the individuals affected by the decisions made using ADM This paper focuses on the consequences on the governance and responsibility of administrations increasingly relying on algorithms to make their decisions Does the introduction of ADM in public administrations transform their agency If so why does this change occur and how does it impact the control methods required to supervise the actions of administrations The chosen approach is the agency theory which is suited to deal with delegation specifically between actors from different contextual backgrounds France has been chosen as the case study for this topic as it has put in place relevant laws and public institutions in order to deal with public ADM The method chosen to investigate this issue is based on a literature review as it is appropriate to approach a case study This includes scientific papers for the technical aspects from computer sciences to social and political sciences as well as reports from governments international institutions and private companies More general literature such as articles and blog posts are used for information on the use of ADM in France and the public debate surrounding it Finally the methodology also includes semi structured interviews led with experts working on the topic of ADM in the public sector

The Rise of Generative AI. Applications, Challenges, and Ethical Implications Fatlind Mazreku, 2025-12-10 Scientific Study from the year 2025 in the subject Computer Sciences Artificial Intelligence language English abstract Generative Artificial Intelligence AI refers to algorithms and models capable of producing new content such as text images music or code that mimics or even rivals human creations Recent breakthroughs in model architectures e.g transformers and the advent of large scale models like OpenAI's GPT 3 and DALL E have fueled an explosive growth in generative AI's capabilities and public adoption This paper provides an overview

of generative AI's rise and its transformative impact across various fields. We discuss key applications of generative AI in domains ranging from art and design to software development and medicine, highlighting the innovative benefits it brings, such as enhanced creative productivity and new problem-solving tools. At the same time, we examine the challenges and ethical concerns emerging from generative AI's widespread use, including issues of bias, misinformation, intellectual property, and misuse that have become increasingly urgent. We also analyze the current technical limitations of generative AI, including accuracy, interpretability, and resource demands, and consider future outlooks for the technology. The findings underscore that while generative AI offers unprecedented opportunities and innovations, careful consideration of its ethical implications and proactive governance is essential to ensure it is developed and used responsibly. In conclusion, generative AI stands as a powerful tool that is reshaping creativity, industry, and society, and its continued evolution will depend on balancing its benefits with diligent management of its risks.
