Ishihara's Test Chart 24 Plates Edition 2020 Prof N L Shraman,2020-03-25 Ishihara's color perception test charts are recognized internationally as a highly reliable method of determining color deficiency. With normal color perception, the images and numbers will all be visible. Each color test plate in this hard-bound book is specially printed to measure incrementally higher color sensitivity and specificity. Ishihara test for color blindness 38 plate edition popular and efficient test for red green color vision deficiency quickly differentiates between congenital and acquired defects. Choice of 38 plate 24 plate and 14 plate editions

Ishihara Test Chart 24 Plate Edition Prof N L Shraman,2019-10-09 The original Ishihara color blindness test was introduced in early last century and since then it is by far the most well-known color vision deficiency test all around the world. Dr Shinobu Ishihara from Japan produced three different test sets which are widely used and which all based on the same pseudoisochromatic plates. This test is actually designed to be used in a booklet and is usually executed by an eye doctor. But I have made an online version of the test available right here. The online test is based on the 24 plates edition and will give you a little feedback at the end of the test. As this test is only made to check for red green color blindness, any other form of CVD can not be detected. And at the end, if you like, you can even share your test result with your friends. This way they can see how you performed and try the test themselves if they like to. Be aware. This test consists of scanned plates. The colors are not exactly the same as in the original version. You also have to consider that every computer screen has different color settings and therefore the test results might alter between different trials. If you would like to see all the 24 plates in an overview, you can find them at [Ishihara Test for Colour Deficiency 24 Plates Edition](#)
