Topics include Communications fundamentals from traditional transmission media to establishing communications channels to the PSTN, Data networking and the Internet including the basics of data communications, local area networking, wide area networking, and the Internet and IP infrastructures, Next generation networks including the applications, characteristics, and requirements of the new generation of networks that are being built to quickly and reliably carry the ever-increasing network traffic, focusing on IP services, network infrastructure, optical networking, and broadband access alternatives, Wireless networking including the basics of wireless networking and the technologies involved in WWANs, WMANs, WLANs, and WPANs. *Telecommunications Essentials: the Complete Global Source* Lillian Goleniewski, 2007

**Robotics, Automation and Control** Pavla Pecherková, Miroslav Flídr, Jindřich Duník, 2008-10-01  
This book was conceived as a gathering place of new ideas from academia, industry, research, and practice in the fields of robotics, automation, and control. The aim of the book was to point out interactions among various fields of interests in spite of diversity and narrow specializations which prevail in the current research. The common denominator of all included chapters appears to be a synergy of various specializations. This synergy yields deeper understanding of the treated problems. Each new approach applied to a particular problem can enrich and inspire improvements of already established approaches to the problem.
