Biochemical Engineering James M Lee:

Biochemical Engineering James M. Lee, 1992 An introduction to biochemical engineering for newcomers to the field which looks at enzyme mediated bioprocessing whole cell bioprocessing and the engineering aspects of bioprocessing The book is aimed at chemical engineers new to biochemical engineering techniques and processes **American Chemical Society Directory of Graduate Research, 1987** American Chemical Society, Committee on Professional Training Staff, Committee On American Chemical Society, 1987 Applications of Cell Immobilisation Biotechnology Viktor Nedovic, Ronnie Willaert, 2006-04-06 Cell immobilisation biotechnology is a multidisciplinary area shown to have an important impact on many scientific subdisciplines including biomedicine pharmacology cosmetology food and agricultural sciences beverage production industrial waste treatment analytical applications biologics production Cell Immobilisation Biotechnology is an outcome of the editors intention to collate the extensive and widespread information on fundamental aspects and applications of immobilisation encapsulation biotechnology into a comprehensive reference work and to provide an overview of the most recent results and developments in this domain Cell Immobilisation Biotechnology is divided into the two book volumes FOBI 8A and FOBI 8B The FOBI 8A volume Fundamentals of Cell Immobilisation Biotechnology is dedicated to fundamental aspects of cell immobilisation while the present volume FOBI 8B Applications of Cell Immobilisation Biotechnology deals with diverse applications of this technology **Plant Cells** J.-J. Zhong, 2003-07-01 Plants produce more than 30 000 types of chemicals including pharmaceuticals pigments and other fine chemicals which is four times more than those obtained from microbes Plant cell culture has been receiving great attention as an alternative for the production of valuable plant derived secondary metabolites since it has many advantages over whole plant cultivation However much more research is required to enhance the culture productivity and reduce the processing costs which is the key to the commercialization of plant cell culture processes The recent achievements in related biochemical engineering studies are reviewed in Chapter 1 The effect of gaseous compounds on plant cell behavior has been little studied and Chapter 2 focuses on these gas concentration effects including oxygen carbon dioxide ethylene and others such as volatile hormones like methyl jasmonate on secondary metabolite production by plant cell cultures Two metabolites of current interest i.e. the antimalarial artemisinin known as qing hao su in China that is produced by *Artemisia annua* sweet wormwood and taxanes used for anticancer therapy that are produced by species of *Taxus* are taken as examples Bioprocess integration is another hot topic in plant cell culture technology Because most of the plant secondary metabolites are toxic to the cells at high concentrations during the culture removal of the product in situ during the culture can lead to the enhanced productivity Various integrated bioprocessing techniques are discussed in Chapter 3 **Abstracts of Papers** American Chemical Society, 1991 *Forthcoming Books* Rose Arny, 1992 Biotechnology Engineers: Biographical Directory, 1985 **Books in Print**, 1994 *Directory of American Research and Technology, 1996* Bowker Editorial Staff, R R Bowker
