**Foundations of College Chemistry, International Adaptation** Morris Hein, Susan Arena, Cary Willard, 2023-05-16  
Foundations of College Chemistry 16th edition presents chemistry as a modern vital subject and is designed to make introductory chemistry accessible to all beginning students. It is intended for students who have never taken a chemistry course or those who had a significant interruption in their studies but plan to continue with the general chemistry sequence. The central focus is to make chemistry interesting and understandable and teach students the problem solving skills they will need. This International Adaptation offers new and updated content with improved presentation of all course material. It builds on the strengths of previous editions including clear explanations and step by step problem solving. The material emphasizes real world applications of chemistry as the authors develop the principles that form the foundation for the further study of chemistry. There is new and expanded coverage of polarizing power and polarizability, Fajans rules, collision number and mean free path, abnormal molecular masses and van t Hoff factor and applications of radioactivity. Assessment, Learning and Judgement in Higher Education Gordon Joughin, 2008-12-11  
There has been a remarkable growth of interest in the assessment of student learning and its relation to the process of learning in higher education over the past ten years. This interest has been expressed in various ways through large scale research projects, international conferences, the development of principles of assessment that supports learning, a growing awareness of the role of feedback as an integral part of the learning process, and the publication of exemplary assessment practices. At the same time, more limited attention has been given to the underlying nature of assessment, to the concerns that arise when assessment is construed as a measurement process, and to the role of judgement in evaluating the quality of students work. It is now timely to take stock of some of the critical concepts that underpin our understanding of the multifarious relationships between assessment and learning and to explicate the nature of assessment as judgement. Despite the recent growth in interest noted above, assessment in higher education remains under conceptualized. This book seeks to make a significant contribution to conceptualizing key aspects of assessment, learning and judgement. **Introduction to Chemical Principles** Howard Stephen Stoker, 1999  
Chemistry for students who need full exposure to general chemistry but in compact one semester 17 chapter paperback format. Strong emphasis on problem solving with over 5000 problems in end of chapter material arranged in matched pairs. More real life applications added to this edition plus faces of chemistry. **Research Methods in Pharmacy Practice** Zubin Austin, Jane Sutton, 2018-02-21
