

A large molecular model of a complex organic molecule, possibly a protein or a large polymer, is shown in the background. The atoms are represented by spheres in various colors (red, blue, green, yellow, orange) and are connected by lines representing chemical bonds. The model is set against a dark, textured background.

**The Journal of General Physiology**, 1920 Official organ of the Society of General Physiologists Sept 1960 *The Effect of Temperature Upon Facet Number in the Bar-eyed Mutant of Drosophila* Joseph Krafka, 1919 New Carbons - Control of Structure and Functions Michio Inagaki, 2000-04-20 The discovery of fullerenes and nanotubes has greatly stimulated the interest of scientists and engineers in carbon materials and has resulted in much scientific research These materials have provided us with many interesting ideas and potential applications some of them practical and some simply dreams for the future In the early 1960s carbon fibers glass like carbons and pyrolytic carbons were developed which were quite different from the carbon materials that had previously been used Carbon fibers exhibited surprisingly good mechanical properties glass like carbons exhibited brittle fracture resulting in a conchoidal fracture surface similar to sodium glass and giving no carbon dust and pyrolytic carbons were produced by a new production process of chemical vapour deposition and showed very high anisotropy These carbons materials made a great impact not only on the carbon community who had been working on carbon materials but also on people working in the fields of materials science and engineering They were used to develop a variety of new applications in technological fields such as semiconductors microelectronics aerospace and high temperature etc These newly developed carbon materials were called NEW CARBONS in comparison with carbon materials such as artificial graphites represented by graphite electrodes carbon blacks and activated carbons which maybe thought of

as CLASSICAL CARBONS Later other new carbons such as activated carbons and those with novel functions isotropic high density graphites intercalation compounds various composites etc were developed In 1994 Professor Michio Inagaki published a book entitled New Carbon Materials Structure and Functions with his friend Professor Yoshihiro Hishiyama of Musashi Institute of Technology published by Gihoudou Shuppan in Japanese However progress in the fields of these new carbons is so rapid that the previous book is already out of date For this reason the author has decided to write an English text on New Carbons The text focuses on New Carbons based on hexagonal networks of carbon atoms i e graphite related materials The fundamental concept underlying this book is that the structure and functions of these materials are principally governed by their texture The aim is to give readers a comprehensive understanding of New Carbons through the description of their structure and texture along with the properties that are largely dependent on them *The Bookseller* ,1912
