devoted to some common but often only crudely used mathematical methods such as numerical differentiation Romberg integration and cubic spline interpolation Another new chapter shows how to use linear algebra on the spreadsheet with Volpi's extensive matrix toolbox of custom functions and macros A third newly added chapter describes how to set up the spreadsheet to make it less error prone and how to get superaccurate answers in Excel The substantially enlarged chapter on writing functions and macros now has a set of MacroMorsels to illustrate specific points that otherwise might trip up novice programmers and a detailed description of Excel's extensive debugging tools All this is presented in an easily digestible format illustrated with many examples from the literature and supported by a large collection of open access i.e. fully transparent and user modifiable custom functions and macros
