Design Step 8.1 - Obtain Design Criteria

This pier design example is based on *AASHTO LRFD Bridge Design Specifications* (through 2002 interims). The design methods presented throughout the example are meant to be the most widely used in general bridge engineering practice.

The first design step is to identify the appropriate design criteria. This includes, but is not limited to, defining material properties, identifying relevant superstructure information, determining the required pier height, and determining the bottom of footing elevation.

Refer to Design Step 1 for introductory information about this design example. Additional information is presented about the design assumptions, methodology, and criteria for the entire bridge, including the pier.

The following units are defined for use in this design example:

$$K = 1000lb \quad Kcf = \frac{K}{ft^3} \quad ksi = \frac{K}{in^2} \quad ksf = \frac{K}{ft^2} \quad klf = \frac{K}{ft}$$

Material Properties:

Concrete density:	$W_c = 0.150kcf$	S Table 3.5.1-1
Concrete 28-day compressive strength:	$f_c = 4.0ksi$	S5.4.2.1 C Table 5.4.2.1-1
Reinforcement strength:	$f_y = 60.0ksi$	S5.4.3

Concrete 28-day compressive strength - For all components of this pier design example, 4.0 ksi is used for the 28-day compressive strength. However, per the Specifications, 2.4 ksi could be used for the

Tamboli,1997 Very Good No Highlights or Markup all pages are intact *LRFD Steel Design Using Advanced Analysis* W.F. Chen,Seung-Eock Kim,1997-01-30 LRFD Steel Design Using Advanced Analysis uses practical advanced analysis to produce almost identical member sizes to those of the Load and Resistance Factor Design LRFD method The main advantage of the advanced analysis method is that tedious and sometimes confusing separate member capacity checks encompassed by the AISC LRFD specification equations are not necessary Advanced analysis can sufficiently capture the limit state strength and stability of a structural system and its individual member directly While the use of elastic analysis is still the norm in engineering practice a new generation of codes is expected to adopt the advanced analysis methodology in the near future leading to significant savings in design effort In recent years the continued rapid development in computer hardware and software coupled with an increased understanding of structural behavior has made it feasible to adopt the advanced analysis techniques for design office use Drs Chen and Kim both experienced and respected engineers contribute their expertise to this text which is intended for both the graduate student and the practicing engineer Previous knowledge of the subject is not necessary but familiarity with methods of elastic analysis and conventional LRFD design is expected The advanced analysis in the book is presented in a practical and simple manner with attention directed to both analysis and design emphasizing the direct use of the methods in engineering practice This is a great introduction to an exciting new trend in structural engineering Steel Structures, 4th Edition Zahid Ahmad Siddiqi,2017-03-14 At the end of year 2005 new AISC Specification was released that contained formulas for both Allowable Stress Design and Load and Resistance Factor Design in non dimensional format to be used for both the FPS and SI units In year 2010 this specification for steel structures design and the seismic provisions were updated This specification was further revised in 2016 This book is prepared in the light of the new Specifications AASHTO LRFD Specifications are used to present the concepts of bridge loading and the design procedure As in the first edition in place of explaining the various aspects of design such as checking various strength capacities stability requirements and serviceability limits in separate chapters complete design including all the major steps of design are presented in individual units for various types of members It is expected that this procedure gives true picture of design process to the beginners and the practicing engineers This book is more useful if it is used along with another publication LRFD Steel Design Aids termed as Design Aids in this book The flow charts given in different sections of this book may easily be computerized to get custom made computer programs for personal use International system of units SI is used throughout the book Suggestions for further improvement of the presentation will be highly appreciated and will be incorporated in the future editions *Structural Steel Design* Jack C.
