from other classical systems of beekeeping through the use of specific methods it is oriented towards the real actual needs of the bee colonies in direct connection with both the material and the universal laws governing matter and substance It is characterized as a HOLISTIC System and introduces for the first time the MATRIX Concept This is an intangible abstract element belonging to subtle plans as defined by the author representing the very basis of the life of a bee colony With a view to assessing what happens at a certain point in the bee colony the author introduces the eloquent honeycomb method which consists of introducing an empty frame into the hive without an artificial comb attached to it where by liaising to the matrix the bees will build up in a few days or not a natural comb from bottom up with differentiated cells in which the queen bee will lay eggs or not Depending on these events we will be able to read the actual status of the colony in question Using this method the author emphasizes for the first time a new type of cells built by bees which he calls conversion cells He provides designs for new preservation and maintenance methods and techniques throughout the year queen bees natural selection and breeding methods and disease prevention and prophylaxis methods thus explaining in complete detail the complex activities that beekeepers need to perform in an apiary In this book there are for certain at least five patents related to procedures methods and devices of utmost international scientific importance in the original scientific content of this specialized work For all these scientific innovations as well as for the new HOLISTIC complex and complete approach in the field of beekeeping upon the proposition of the Scientific Researcher of 2nd level George Florea TOBA Ph D the author is granted the title of Honorary Scientific Researcher within the Professor David Davidescu Biodiversity Research and Studies Center

Organic Beekeeping Grant F. C. Gillard, 2015-01-21 Chemicals used to be the answer to all our problems today they seem to be the cause Once upon a time we planted our gardens in dirt today we pay for them with plastic Jolted awake society has discovered new answers in an old solution Less chemical more organic Beekeepers likewise are looking for healthier options something more than a chemical response that seems to bring its own complications The interest in organic beekeeping has taken root But organic beekeeping is more complex than you would believe Coming out of an era when defining organics could mean whatever you decided it meant the USDA formed The National Organic Program NOP to bring all organic participants and producers to the same table and get them all on the page The NOP sought to end the duplicity by bringing consistency and integrity with a set of rules and regulations of what organic is and what it is not But this also meant the NOP restricted the use of the word organic until a producer could verify compliance with some very strict regulations A beekeeper cannot simply declare their apiary is organic nor can they describe their management as Natural beekeeping that keeps bees organically In Organic Beekeeping Grant Gillard peels back the implied simplicity and expounds the accountability for beekeepers who want to keep honey bees organically and produce organic honey Our chemical laden industrial production agriculture has made it virtually impossible to legitimately keep honey bees under organic management Our concession as beekeepers is find ways to keep honey bees as organic as possible
