New Cosmetic Science By T Mitsui:

New Cosmetic Science T. Mitsui, 1997-06-19 Cosmetic science covers the fields from natural sciences to human and social sciences and is an important interdisciplinary element in various scientific disciplines. New Cosmetic Science is a completely updated comprehensive review of its 35 year old counterpart Cosmetic Science. New Cosmetic Science has been written to give as many people as possible a better understanding of the subject from scientists and technologists specializing in cosmetic research and manufacturing to students of cosmetic science and people with a wide range of interests concerning cosmetics. The relationship between the various disciplines comprising cosmetic science and cosmetics is described in Part I. In addition to discussing the safety of cosmetics, the Usefulness of Cosmetics rapidly becoming an important theme is described using research examples. The latest findings on cosmetic stability are presented as are databases, books and magazines increasingly used by cosmetic scientists. Part II deals with cosmetics from a usage viewpoint including skin care cosmetics, makeup cosmetics, hair care cosmetics, fragrances, body cosmetics and oral care cosmetics. Oral care cosmetics and body cosmetics are presented with product performance types, main components, prescriptions and manufacturing methods described for each item. This excellent volume enlightens the reader not only on current cosmetics and usage but indicates future progress enlarging the beneficial effects of cosmetics. Products with better pharmaceutical properties, cosmeceuticals working both physically and psychologically are also highlighted. *Gels Handbook, Four-Volume Set* Kanji Kajiwara, 2000-10-18 This major reference work covering the important materials science area of gels is a translation of a Japanese handbook. The three volume set is organized to cover the following fundamentals, functions and environmental issues. Gels Handbook also contains an appendix, complete references and data on gel compounds. Recently polymer gels have attracted many scientific researchers, medical doctors and pharmaceutical, chemical and agricultural engineers to the rapidly growing field. Gels are considered to be one of the most promising materials in the 21st Century. They are unique in that they are soft, gentle and can sense and accommodate environmental changes. Because of these unique characteristics, gels have a huge potential in technological and medical applications. They are irreplaceable in the separation of molecules, the release of drugs, artificial skins and organs, sensors, actuators, chemical memories and many other applications. The 21st century is also said to be the century of biotechnology where two kinds of biopolymers play crucial roles: DNA as a bearer of genetic information and proteins as molecular machines. In spite of the dramatic progress in molecular biology and the Human Genome project, the basic principles behind the function and design of such polymeric machines are in the black box. Science and technologies that will emerge from those of polymer gels will shed light on such principles. Some researchers have already developed prototypes of artificial glands, pancreas, artificial muscles and actuators and chemical sensors and molecular recovery systems using polymer gels. The Gels Handbook is an invaluable source of information on this rapidly growing field. It covers the entire area from the scientific basics to the applications of the

materials The authors are among the leading researchers doctors engineers and patent officers in Japan This book can be used as a textbook or an encyclopedia and is a must for those involved in gel research or applications Key Features Comprehensive coverage of a popular topic in materials science Is the first english language gels handbook Includes numerous figures tables and photos
