

Pressure Relief Valve Operation Flow

CLOSED

OPEN

1 - NORMAL OPERATION

The system pressure is below the PRV's set point, keeping the disc sealed by the spring, preventing fluid or gas escape.

2 - PRESSURE INCREASE

As pressure rises and nears the set point, the fluid's force on the disc begins to overcome the spring tension.

3 - VALVE OPENING

When pressure exceeds the set point, the disc lifts, allowing fluid to escape and reducing system pressure.

4 - PRESSURE INCREASE

The valve stays open until the pressure drops below the set point, then the spring closes the valve, stopping the flow.
