Risk Management Glen B. Alleman, Jon M. Quigley, 2024-03-15 Project success is an elusive goal in every business or technical domain Project failure usually results from unhandled risks to the technical cost and schedule aspects of the project There are four primary root causes of project failure Unrealistic performance expectation with missing Measures of Effectiveness Unrealistic cost and schedule estimates based on inadequate risk adjusted growth models Inadequate assessment of risk and unmitigated exposure to these risks without proper handling strategies Unanticipated technical issues with alternative plans and solutions to maintain the effectiveness of the project processes and its deliverables Risk Management provides a comprehensive overview of the people principles processes and practices as the fundamental base upon which an effective risk management system resides However this does not guarantee effective risk management and successful projects and businesses The first half of the book describes risk management processes as well as a delineation between risk and hazards and how these are connected The second half of the book provides industry examples of the approach to risk management in specific context and with specific approaches and artifacts where applicable The book focuses on risks created by uncertainty their identification and the corrective and preventive actions needed to address these risks to increase the probability of project success The book's goal is to provide a context driven framework developing a foundation for a rational approach to risk management that makes adaptation to circumstances as easy as possible

Aviation Investment Doramas Jorge-Calderón, 2020-12-28 Aviation Investment uniquely addresses investment appraisal methods across the key industries that make up the aviation sector including the airports air traffic management airline and aircraft manufacturing or aeronautic industries This practice oriented book presents methods through realistic case studies It covers both economic appraisal or cost benefit analysis measuring the value of projects to society and financial appraisal valuing projects as cash generators This substantially expanded second edition covers in greater detail the treatment of environmental emissions paying particular attention to climate change It addresses the treatment of Market Based Mechanisms MBMs including cap and trade systems like ETS and offset systems like CORSIA and compares them to environmental taxes It also addresses the adjustments needed to measure the foreign exchange generating value of projects relevant in the presence of trade barriers The new edition includes two new project types One is airport relocations perhaps the most complex type of airport projects where the economic case is often more nuanced than may be apparent The second is the re introduction of supersonic travel Aviation Investment offers all aviation sub sectors a single source reference bringing together the theoretical background of the economic appraisal literature and aviation investment in practice It is written in a style that is accessible to non academic professionals using formulae only where strictly necessary to enable practical applications and benefits from the substantial practical experience of the author

Analysis of Energy Systems Vincenzo Bianco, 2017-05-12 The analysis of energy systems is of paramount

importance in modern societies since it is fundamental to guarantee a sustainable economic development. It combines technical and economic research with a specific focus on quantitative modelling in order to optimize the modalities of energy demand and supply globally. The book covers major advanced topics related to the analysis of energy by considering different aspects, namely management, planning, and policies. The most recent trends, such as smart grids, transition from fossil fuels to renewables-based energy systems, and distributed generation, are also discussed in this book. Intended to be a collection of various contributions from experts all around the world, it includes latest research results, innovations, and methodologies about the analysis of energy systems. The book also focuses to contribute to the current debate related to the evolution of energy systems by discussing in an open way the pros and cons without any pre-constituted point of view. The title is aimed to be a reference for the academic community, students, and professionals with a wider interdisciplinary background.

Key Features
Presents integration of renewable sources with conventional energy systems
Topic is addressed from a multidisciplinary point of view, i.e. economy, technical, modelling, planning
Investigates management and planning aspects of future energy supplies
Multidimensional nature of energy systems is highlighted and discussed
Contributes towards implementing policy measures to reduce primary energy consumptions and carbon footprint

[Uncertainty in Climate Change Research](#) Linda O. Mearns, Chris E. Forest, Hayley J. Fowler, Robert Lempert, Robert L. Wilby, 2025-07-14

This edited volume with open access discusses all aspects of uncertainty in climate change research with a unique emphasis on decision making under uncertainty and the assessment of various uncertainties in the landscape of decision making. By analyzing uncertainty through the lens of decision making, the book seeks to understand and assess the various uncertainties inherent in climate change research, including uncertainties in economic impacts, human health, and vulnerability. Fluctuations in the physical climate system, changes in infrastructure, and future climate projections are also discussed. Very little published material exists on the uncertainties regarding vulnerability of different populations to climate change, and so the book characterizes the uncertainty in vulnerability to better formulate solutions to climate change problems in affected populations. The volume will be of interest to students, post-docs, early career scientists, and researchers interested in all aspects of climate change.

After an introduction that addresses the issue of uncertainty in general as it pertains to climate change research, the book is divided into 5 main sections. Section 1 focuses on uncertainty in policy and decision making and how climate-related policy choices impact risk management, impact mitigation, and adaptation. Section 2 discusses uncertainty in climate change impacts, including impacts in agriculture, water resources, transportation, infrastructure, and human health and vulnerability. Section 3 analyzes physical climate uncertainties, such as Earth system projections, emissions concentrations, and sea level rise projections. Section 4 details the methods for quantifying uncertainty from a statistical perspective. Section 5 concludes the volume with discussions on special topics and integrated themes on

uncertainty including ethics and uncertainty communication the economics of climate change and integrated modeling for decision support
