Chapter 7 Active Reading Guide Cellular Respiration and Fermentation

Overview: Before getting involved with the details of cellular respiration and photosynthesis, take a second to look at the big picture (Figure 7.2). Photosynthesis and cellular respiration are key ecological concepts involved with energy flow.

Section 1

1. Explain the difference between *fermentation* and *cellular respiration*.
2. Give the formula (with names) for the catabolic degradation of glucose by cellular respiration.
3. Both cellular respiration and photosynthesis are *redox reactions*. In redox, reactions pay attention to the flow of electrons. What is the difference between oxidation and reduction?
4. The following is a generalized formula for a redox reaction. Draw an arrow showing which component (X or Y) is oxidized and which is reduced.

_____ is the reducing agent in this reaction, and _____ is the oxidizing agent.

5. When compounds lose electrons, they _____ energy; when compounds gain electrons, they _____ energy.
6. In cellular respiration, electrons are not transferred directly from glucose to oxygen. Following the movement of hydrogens allows you to follow the flow of electrons. The hydrogens are held in the cell temporarily by what electron carrier? What *electron carrier* is hydrogen transferred to first?
