Environmental Transformations A Geography Of The Anthropocene:

Environmental Transformations Mark Whitehead,2014-04-16 From the depths of the oceans to the highest reaches of the atmosphere the human impact on the environment is significant and undeniable These forms of global and local environmental change collectively appear to signal the arrival of a new geological epoch the Anthropocene This is a geological era defined not by natural environmental fluctuations or meteorite impacts but by collective actions of humanity Environmental Transformations offers a concise and accessible introduction to the human practices and systems that sustain the Anthropocene It combines accounts of the carbon cycle global heat balances entropy hydrology forest ecology and pedology with theories of demography war industrial capitalism urban development state theory and behavioural psychology This book charts the particular role of geography and geographers in studying environmental change and its human drivers It provides a review of critical theories that can help to uncover the socio economic and political factors that influence environmental change It also explores key issues in contemporary environmental studies such as resource use water scarcity climate change industrial pollution and deforestation These issues are mapped through a series of geographical case studies to illustrate the particular value of geographical notions of space place and scale in uncovering the complex nature of environmental change in different socio economic political and cultural contexts Finally the book considers the different ways in which nations communities and individuals around the world are adapting to environmental change in the twenty first century Particular attention is given throughout to the uneven geographical opportunities that different communities have to adapt to environmental change and to the questions of social justice this situation raises This book encourages students to engage in the scientific uncertainties that surround the study of environmental change while also discussing both pessimistic and more optimistic views on the ability of humanity to address the environmental challenges of our current era **Hope**

and Grief in the Anthropocene Lesley Head,2016-02-22 The Anthropocene is a volatile and potentially catastrophic age demanding new ways of thinking about relations between humans and the nonhuman world This book explores how responses to environmental challenges are hampered by a grief for a pristine and certain past rather than considering the scale of the necessary socioeconomic change for a future world Conceptualisations of human nature relations must recognise both human power and its embeddedness within material relations Hope is a risky and complex process of possibility that carries painful emotions it is something to be practised rather than felt As centralised governmental solutions regarding climate change appear insufficient intellectual and practical resources can be derived from everyday understandings and practices Empirical examples from rural and urban contexts and with diverse research participants indigenous communities climate scientists weed managers suburban householders help us to consider capacity vulnerability and hope in new ways

Handbook of Cities and the Environment Kevin Archer,Kris Bezdecny,2016-12-30 With an ever growing majority of the world s human population living in city spaces the relationship between cities and nature will be one of the key

environmental issues of the 21st Century This book brings together a diverse set of authors to explore the various aspects of this relationship both theoretically and empirically Rather than considering cities as wholly separate from nature a running theme throughout the book is that cities and city dwellers should be characterized as intrinsic in the creation of specifically urban generated socio natures

Dislocation: Awkward Spatial Transitions Philip Cooke,2021-05-18 Today the world is in the most serious turmoil it has experienced for many centuries These multiple crises arise from the fundamental mistreatment by capitalist competition of the carrying capacity of the planet Even before coronavirus evidently morbid symptoms of over development led many spatial planners to write of the threat of a new Dark Age Many advocated a return to policy decentralisation as the Covid 19 crisis demonstrated once again the failure of global controller mindsets to manage complex systems successfully Dislocation Awkward Spatial Transitions is a critical exploration of where spatial development processes and rules have gone wrong across many economies The chapters lay out which mindsets have been responsible for this and gives pointers to new practices that aim to ameliorate the effects of past failings In the first nine chapters a mapping of key elements of the prevailing omni crisis are summarised These range from an exegesis of the Anthropocene the rise of populism the transition to neoliberalist anti planning and migration as planning issues with pleas for evolutionary change in spatial policy and process dynamics Finally a group of chapters explores the flailing as territorial governances tried to plot the rise of creative cities 4 0 era industry and services and in the built form the role of starchitects in city renewal In the last part attention is devoted to territorial innovation knowledge recombination sustainable mobility and finally green entrepreneurship as necessary elements of a post coronavirus climate change mitigation and sustainable mobility set of survival strategies The chapters in this book were originally published in the journal European Planning Studies

The Anthropocene David R. Butler, 2021-12-21 This book is devoted to the Anthropocene the period of unprecedented human impacts on Earth s environmental systems and illustrates how Geographers envision the concept of the Anthropocene This edited volume illustrates that geographers have a diverse perspective on what the Anthropocene is and represents The chapters also show that geographers do not feel it necessary to identify only one starting point for the temporal onset of the Anthropocene Several starting points are suggested and some authors support the concept of a time transgressive Anthropocene Chapters in this book are organized into six sections but many of them transcend easy categorization and could have fit into two or even three different sections Geographers embrace the concept of the Anthropocene while defining it and studying it in a variety of ways that clearly show the breadth and diversity of the discipline This book will be of great value to scholars researchers and students interested in geography environmental humanities environmental studies and anthropology The chapters in this book were originally published as a special issue of the journal Annals of the American Association of Geographers

Anthropocene Erle C. Ellis, 2018 Climate scientists geologists ecologists and archaeologists recognize the profound effects of human activity on Earth though whether and how this should be recognized as a formal geological epoch the Anthropocene remains under debate Erle Ellis describes how the

Anthropocene concept is affecting the sciences humanities and politics **What Next for Sustainable Development?**

James Meadowcroft, David Banister, Erling Holden, Oluf Langhelle, Kristin Linnerud, Geoffrey Gilpin, 2019 This book examines the international experience with sustainable development since the concept was brought to world wide attention in Our Common Future the 1987 report of the World Commission on Environment and Development Scholars from a variety of disciplinary backgrounds engage with three critical themes negotiating environmental limits equity environment and development and transitions and transformations In light of the 2030 Sustainable Development Goals recently adopted by the United Nations General Assembly they ask what lies ahead for sustainable development Publisher s website

Ratter, Martin Welp, 2012-06-25 This book deals with the potentials of social ecological systems analysis for resolving sustainability problems Contributors relate inter and transdisciplinary perspectives to systemic dynamics human behavior and the different dimensions and scales With a problem focused sustainability oriented approach to the analysis of human nature relations this text will be a useful resource for scholars of human and social ecology geography sociology development studies social anthropology and natural resources management

Governing the Anthropocene Sarah Clement, 2020-12-05 This book focuses on the present and future challenges of managing ecosystem transformation on a planet where human impacts are pervasive In this new epoch the Anthropocene the already rapid rate of species loss is amplified by climate change and other stress factors causing transformation of highly valued landscapes Many locations are already transforming into novel ecosystems where new species interactions and ecological functions are creating landscapes unlike anything seen before This has sparked contentious debate not just about science but about decision making responsibility fairness and human capacity to intervene Clement argues that the social and ecological reality of the Anthropocene requires modernised governance and policy to confront these new challenges and achieve ecological objectives There is a real opportunity to enable society to cope with transformed ecosystems by changing governance but this is notoriously difficult Aimed at anyone involved in these conversations be those researchers practitioners decision makers or students this book brings together diffuse research exploring how to confront institutional change and ecological transformation in different contexts and provides insight into how to translate governance concepts into productive pathways forward

Futures: Imagining Socioecological Transformation Bruce Willems-Braun, 2018-02-02 Futures Imagining Socioecological Transformation brings together leading scholars to explore how we might know enact and struggle for the conjoined social and ecological transformations we need to achieve just and sustainable futures The question of transformation and how it might be achieved is explored across a variety of topics and geographical sites and through heterodox analytical and theoretical approaches in a collective effort to move beyond a form of critique that hands down judgements to one that brings new ideas and new possibilities to life Chapters are lively and original engagements with concrete situations that sparkle with creativity

Together they add up to an impressive study of how to live and what to struggle for in the complex socioecological landscapes of the Anthropocene This book was previously published as a special issue of the Annals of the Association of American Geographers **Rethinking the Environment for the Anthropocene** Manuel Arias-Maldonado, Zev Trachtenberg, 2019-01-15 This book brings together the most current thinking about the Anthropocene in the field of Environmental Political Theory EPT It displays the distinctive contribution EPT makes to the task of thinking through what the environment means in this time of pervasive human influence over natural systems Across its chapters the book helps develop the idea of socionatural relations an idea that frames the environment in the Anthropocene in terms of the interconnected relationship between human beings and their surroundings Coming from both well established and newer voices in the field the chapters in the book show the diversity of points of view theorists take toward the Anthropocene idea and socionatural relations more generally However all the chapters exemplify a characteristic of work in EPT the self conscious effort to provide normative interpretations that are responsive to scientific accounts The Introduction explains the complicated interaction between science and EPT showing how it positions EPT to consider the Anthropocene And the Afterword by a pioneer in the field relates all the chapters to a perspective that has been deeply influential in EPT This book will be of interest to scholars already engaged in EPT But it will also serve as an introduction to the field for students of Political Theory Philosophy Environmental Studies and related disciplines who will learn about the EPT approach from the Introduction and then see it applied to the pressing question of the Anthropocene in the ensuing chapters The book will also help readers interested in the Anthropocene from any disciplinary perspective develop a critical understanding of its political meanings **Anthropocene Geopolitics** Simon Dalby, 2020-02-11 We now find ourselves in a new geological age the Anthropocene The climate is changing and species are disappearing at a rate not seen since Earth's major extinctions The rapid large scale changes caused by fossil fuel powered globalization increasingly threaten societies in new unforeseen ways But most security policies continue to be built on notions that look backward to a time when geopolitical threats derived mainly from the rivalries of states with fixed boundaries Instead Anthropocene Geopolitics shows that security policy must look forward to quickly shape a sustainable world no longer dependent on fossil fuels A future of long term peace and geopolitical security depends on keeping the earth in conditions roughly similar to those we have known throughout history Minimizing disruptions that would further put civilization at risk of extinction urgently requires policies that reflect new Anthropocene planetary boundaries This book is published in English Depuis la fin de la dernière période glaciaire l'humanité a transformé sa niche écologique modifié sa position dans le système et provoqué des changements climatiques radicaux et affecté la diversité des espèces aux quatre coins du monde ce qui a entraîné l'apparition d'une nouvelle époque géologique l'Anthropocène l'activité humaine exerce un impact direct sur les frontières qu'elle transforme durablement alors que ces mêmes frontières ont constitué le cadre naturel dans lequel l'humanité a pu prospérer durant les dix derniers millénaires

Les changements rapides qui affectent notre système terrestre remettent directement en cause les anciennes hypothèses qui considéraient des frontières stables comme le principal fondement de la souveraineté. Aujourd'hui ces postulats primaires doivent impérativement être révalués. Paradoxalement la phase de mondialisation actuelle nécessite une redéfinition de la notion même de frontières stables. En effet l'élargissement des droits de propriété et des champs de compétence pourrait en fait prévenir la mise en œuvre de mesures d'adaptation efficaces visant à répondre aux enjeux du changement climatique. Garantir la survie d'une économie fondée sur la consommation de combustibles fossiles demeure ce jour une priorité politique comme le fait de devoir faire face aux catastrophes naturelles à l'échelle mondiale ce qui rend les objectifs de durabilité autant plus difficiles à atteindre dans un environnement en pleine mutation où les rivalités politiques exacerbées façonnent la politique globale contemporaine. L'entrée de la Terre dans une nouvelle époque géologique l'Anthropocène où l'homme représente un formidable défi que il convient de relever en établissant une véritable politique de durabilité et ce au moment où l'humanité s'engage dans la dernière phase du processus de mondialisation. Dans un tel contexte pour être réellement efficaces les connaissances et les perspectives résultant des analyses académiques et des initiatives pratiques de toute nature devront être intégrées dans une vision globale.

[Environment and Society](#) Manuel Arias-Maldonado, 2015-03-05 This short book sets out to explore the concept of nature in the context of a changing reality in which the extent of our transformation of the environment has become evident. What is nature and to what extent has humanity transformed it? How do nature and society relate to one another? What does the idea of a sustainable society entail and how can nature be understood as a political subject? What is the Anthropocene and how does it affect nature as both an idea and a material entity? Has nature perhaps ended? In addressing these questions the author delivers a concise but meaningful study of contemporary understandings of nature, one that goes beyond the limits posed by a single discipline. Adopting a truly comprehensive perspective the work incorporates classical disciplines such as philosophy, evolutionary theory and the history of ideas, new and mixed approaches ranging from environmental sociology to neurobiology and ecological economics and the emerging area of the environmental humanities and represents a growing branch of political thought that views nature as a new political subject.

[Global Politics](#) Ben Whitham, Andrew Heywood, 2023-03-31 In turbulent global times your study of this subject is increasingly necessary and urgent. Featuring a new chapter on critical theories and revised to take a less Eurocentric approach to concepts and case studies this new edition allows you to tackle global politics' important concepts, debates and problems. How can theories help us to understand the politics of a global pandemic? Do we live in a post-truth world of fake news and disinformation? Does international aid work? Does the United States remain a global hegemon? What is the Anthropocene and how does it shape global politics? Are global politics constrained by a North-South divide? What are the possible futures of global politics and the politics of outer space? Delving into topics as diverse as anarchy, intersectionality, Confucianism and neoconservatism, boxed features give you confidence in political analysis. Focus on learn more about the global colour line or

the tragedy of the commons Key figures discuss the ideas of Hans Morgenthau Frantz Fanon or bell hooks Debating argue whether the United Nations are obsolete or whether nuclear weapons promote peace Global politics in action apply your learning to the migration crisis in Europe or the Arab Spring Approaches to consider human rights or the Covid 19 pandemic from the perspective of realist liberal postcolonial Marxist feminist constructivist and post structuralist theory Global actors understand the significance of Black Lives Matter Amnesty International or the International Monetary Fund Spanning the development of global politics from the early origins of globalization through to the return of multipolarity in the twenty first century this is an essential text for undergraduates studying global politics and international relations

Deltas in the Anthropocene Robert J. Nicholls, W. Neil Adger, Craig W. Hutton, Susan E. Hanson, 2019-08-28 The Anthropocene is the human dominated modern era that has accelerated social environmental and climate change across the world in the last few decades This open access book examines the challenges the Anthropocene presents to the sustainable management of deltas both the many threats as well as the opportunities In the world s deltas the Anthropocene is manifest in major land use change the damming of rivers the engineering of coasts and the growth of some of the world s largest megacities deltas are home to one in twelve of all people in the world The book explores bio physical and social dynamics and makes clear adaptation choices and trade offs that underpin policy and governance processes including visionary delta management plans It details new analysis to illustrate these challenges based on three significant and contrasting deltas the Ganges Brahmaputra Meghna Mahanadi and Volta This multi disciplinary policy orientated volume is strongly aligned to the United Nation s Sustainable Development Goals as delta populations often experience extremes of poverty gender and structural inequality variable levels of health and well being while being vulnerable to extreme and systematic climate change

Science John Michels (Journalist), 2011 Developing Earthly Attachments in the Anthropocene Edward H. Huijbens, 2021-04-26 This book explores the development and significance of an Earth oriented progressive approach to fostering global wellbeing and inclusive societies in an era of climate change and uncertainty Developing Earthly Attachments in the Anthropocene examines the ways in which the Earth has become a source of political social and cultural theory in times of global climate change The book explains how the Earth contributes to the creation of a regenerative culture drawing examples from the Netherlands and Iceland These examples offer understandings of how legacies of non respectful exploitative practices culminating in the rapid post war growth of global consumption have resulted in impacts on the ecosystem highlighting the challenges of living with planet Earth The book familiarizes readers with the implied agencies of the Earth which become evident in our reliance on the carbon economy a factor of modern day globalized capitalism responsible for global environmental change and emergency It also suggests ways to inspire and develop new ways of spatial sense making for those seeking earthly attachments Offering novel theoretical and practical insights for politically active people this book will appeal to those involved in local and national policy making processes It will also be of interest to
