

GEOPHYSICAL METHODS OF EXPLORATION

CORE DRILLING

Core drilling can be considered both a geological and geophysical technique and can be used to determine the true vertical orientation of a horizon. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by comparison and adjustment to known well locations. Geophysical methods include geophysical logging (acoustic, gamma, and resistivity) and core analysis. Logging measurements are the most significant and costly methods employed throughout exploration since they are usually every horizon.

SEISMIC

Seismic techniques have recently had a major impact on petroleum exploration. They provide a high resolution view of the subsurface. Seismic techniques include reflection, refraction, and surface wave methods. Seismic methods are used to determine the location of structural traps and to determine the thickness of reservoirs. Seismic methods are used to determine the location of structural traps and to determine the thickness of reservoirs. Seismic methods are used to determine the location of structural traps and to determine the thickness of reservoirs.

MAGNETIC TECHNIQUES

The magnetic method is used to determine the magnetic properties of rocks. It is used to determine the location of structural traps and to determine the thickness of reservoirs. Magnetic techniques are used to determine the location of structural traps and to determine the thickness of reservoirs.

ELECTRICAL TECHNIQUES

Electrical techniques are used to determine the electrical properties of rocks. They are used to determine the location of structural traps and to determine the thickness of reservoirs. Electrical techniques are used to determine the location of structural traps and to determine the thickness of reservoirs.

REMOTE SENSING

Remote sensing techniques include satellite, aerial, and ground-based methods. They are used to determine the location of structural traps and to determine the thickness of reservoirs. Remote sensing techniques are used to determine the location of structural traps and to determine the thickness of reservoirs.

CONCLUSIONS
 Geophysical methods are used to determine the location of structural traps and to determine the thickness of reservoirs. They are used to determine the location of structural traps and to determine the thickness of reservoirs.
