**Modern Macroeconomics** Sanjay K. Chugh, 2015-10-23 A textbook that approaches modern macroeconomics through its microeconomic foundations with an emphasis on financial market connections and policy applications. The modern study and analysis of macroeconomics begins by considering how microeconomic units, consumers and firms, make decisions and then investigates how these choices interact to yield economy-wide outcomes. This innovative textbook takes this modern approach to teaching macroeconomics through its microeconomic foundations. It does so by adopting the representative agent paradigm. By modeling the representative consumer and the representative firm, students will learn to describe macroeconomic outcomes and consider the effects of macroeconomic policies. Unique in its coverage of monopolistic competition, financial markets, and the interaction of fiscal and monetary policy, *Modern Macroeconomics* is suitable for use in intermediate undergraduate, advanced undergraduate, and graduate level courses. The book first introduces the building blocks of macroeconomics, the heart of which is the representative consumer. It goes on to offer a brief history of macroeconomic thought, including supply-side economics, the Phillips curve, and the New Keynesian framework. It then covers two policy applications: monetary policy and the interaction of monetary and fiscal policy. Optimal policy analysis for both the flexible price and the rigid price case, long-run steady states, treating the Solow growth framework and the neoclassical growth model, a search and matching framework for the analysis of unemployment, and the application of the tools of modern macroeconomics to open economy or international macroeconomics. End-of-chapter problem sets enable students to apply the concepts they have learned. A separate Solutions Manual will be available for students to purchase. Teaching materials, including complete solutions and slides, will be available to qualified instructors. **Student Solutions Manual to**

**Dynamic** Weshah Razzak, 2023-06-16 This book explains inflation dynamics using time series data from 1960 for 42 countries. These countries are different in every aspect: historically, culturally, socially, politically, institutionally, and economically. They are chosen on the basis of data availability only and cover the Middle East and North Africa (MENA) region, Africa, Asia, the Caribbean, Europe, Australasia, and the United States. Inflation reached double digits in the developed countries in the 1970s and 80s, and then central banks successfully stabilized it by anchoring inflation expectations for decades until now. Conditional on common and country-specific shocks such as oil price shocks, financial and banking crises, wars, pandemics, natural disasters, etc., the book tests various theoretical models about the long and short-run relationships between money and prices, money growth and inflation, money growth and real output, expected inflation, the output gap, fiscal policy, and inflation using a number of parametric and non-parametric methods and pays attention to specifications and estimations problems. In addition, it explains why policymakers in inflation-targeting countries, e.g., the U.S., failed to anticipate the recent

sudden rise in inflation And it examines the fallibility of the Modern Monetary Theory s policy prescription to reduce inflation by raising taxes This is a unique and innovative book which will find an audience among students academics researchers policy makers analysts in corporations private and central banks and international monetary institutions
