World Directory of Crystallographers Allan L. Bednowitz, Armin P. Segmüller, 2013-04-17 A brief historical account of the background leading to the publication of the first four editions of the World Directory of Crystallographers was presented by G Boom in his preface to the Fourth Edition published late in 1971 That edition was produced by traditional typesetting methods from compilations of biographical data prepared by national Sub Editors The major effort required to produce a directory by manual methods provided the impetus to use computer techniques for the Fifth Edition The account of the production of the first computer assisted Directory was described by S C Abrahams in the preface of the Fifth Edition Computer composition which required a machine readable data base offered several major advantages The choice of typeface and range of characters was flexible Corrections and additions to the data base were rapid and once established it was hoped updating for future editions would be simple and inexpensive The data base was put to other Union uses such as preparation of mailing labels and formulation of lists of crystallographers with specified common fields of interest The Fifth Edition of the World Directory of Crystallographers was published in June of 1977 the Sixth in May of 1981 The Subject Indexes for the Fifth and Sixth Editions were printed in 1978 and 1981 respectively both having a limited distribution

Collective Diffusion on Surfaces: Correlation Effects and Adatom Interactions M.C. Tringides, Z. Chvoj, 2012-12-06 As materials research focuses into finding ways to control the growth of atomic scale structures there is correspondingly increasing emphasis on to the problem of surface diffusion Clearly surface diffusion is the key process which determines how atoms move on the surface Controlling this motion can lead to the easy fabrication of well controlled nanostructures broadening the

present possibilities in nanotechnology The paradigm of surface diffusion has outgrown its standard textbook description as a random walk on a rigid substrate In real systems for more complex situations are encountered interacting atoms are commonly present on the surface with their motions highly correlated different phases form on the surface with different dynamics large concentration gradients drive the system far away from the linear response regime rich metastable structures form as a result of balanced interplay between different kinetic processes substrate relaxation can change the energy landscape and the diffusion barriers etc The motivation behind this ARW was to bring together the international community working on these problems We felt that the large number of researchers new results and well formulated open questions in this area require some form of integration in a single forum The ARW and the upcoming proceedings book with papers by the majority of the participants has provided this forum The meeting was not planned as a continuation of the earlier NATO ASI in Rhodes in 1996 although several people have participated in both meetings
