The new edition includes the implementation of web based animations to aid visual learners. At key points in the book students are directed to view an animation and then are provided with assignments to alter the animation input and analyze the results. The concepts are then enhanced and supported by end of chapter case studies of UNIX Linux and Windows Vista. These provide students with a solid understanding of the key mechanisms of modern operating systems and the types of design tradeoffs and decisions involved in OS design. Because they are embedded into the text as end of chapter material students are able to apply them right at the point of discussion.
