Principles of Electrodynamics and Relativity / Prinzipien der Elektrodynamik und Relativitätstheorie S.

Flügge, 1962-01-11 will be asymptotically integrable that is to say if we displace a vector parallel to itself along a closed curve whose total length is proportional to r then as we remove the curve to infinity the change of the vector that results from the circuit about the curve will tend to zero In the presence of gravitational radiation the total energy will not be conserved because the waves carry some energy with them analogous statements apply to the linear momentum etc But that is not all if there is no coordinate system in which the field strengths drop off as $1/r$ then there is no possibility to generate out of one vector at infinity a whole field of parallel vectors at infinity Thus we are unable in the presence of radiation to define even at infinity a rigid displacement the type of coordinate transformation that is presumably generated by the energy integral Under these circumstances it is very difficult to see how one can define the free vector energy linear momentum in a convincing manner These ambiguities of course do not imply that general relativity lacks quantities that obey equations of continuity rather general relativity suffers in this respect from an embarrassment of riches There is an infinity of such quantities and our difficulty is to single out a subset and to present these as the natural expressions for energy linear momentum etc **A**
