**Credit and Creed** Andreas Rahmatian, 2019-10-28 Money is a legal institution with principal economic and sociological consequences Money is a debt because that is how it is conceptualised and comes into existence as circulating credit if viewed from the creditor's perspective or from the debtor's viewpoint as debt This book presents a legal theory of money based on the concept of dematerialised property It describes the money creation or money supply process for cash and for bank money and looks at modern forms of money such as cryptocurrencies It also shows why mainstream economics presupposes but avoids an analysis of money by effectively eliminating money from the microeconomic market model and declaring it as merely a neutral medium of exchange and unit of account The book explains that money rather brings about and influences substantially the exchange or transaction it is supposed to facilitate only as a neutral medium As the most liquid of all assets money enables financialisation monetisation and commodification in the economy The central role of the banks in the money creation process and in the economy and their strengthened position after the bank rescue measures in the wake of the financial crisis 2008-9 are also discussed Providing a rigorous analysis of the most salient legal issues regarding money this book will appeal to legal theorists economists and anyone working in commercial or banking law

**Patentism Replacing Capitalism** Samuel Meng, 2019-05-03 Based on economic knowledge and logical reasoning this book proposes a solution to economic recessions and offers a route for societal change to end capitalism The author starts with a brief review of the history of economics and then questions and rejects the trend of recent decades that has seen econometrics replace economic theory By reviewing the different schools of economic thought and by examining the limitations of existing theories to business cycles and economic growth the author forms a new theory to explain cyclic economic growth According to this theory economic recessions result from innovation scarcity which in turn results from the flawed design of the patent system The author suggests a new design for the patent system and envisions that the new design would bring about large economic and societal changes Under this new patent system the synergy of the patent and capital markets would ensure that economic recessions could be avoided and that the
