Gregory Mankiw, 2021 *A Financial Theory of the Business Cycle* Edward W. Fuller, Warren Young, 2025-02-17  
*A Financial Theory of the Business Cycle* presents a new approach to business cycle theory based on the net present value. The book develops a novel diagrammatic approach to illustrate how fractional reserve banking systematically distorts net present value calculations. In addition to providing fresh insights the new diagrammatic approach provides a comparative framework that can be used to compare pre existing theories including those of John Maynard Keynes Friedrich Hayek Milton Friedman and Robert E Lucas Jr. The net present value is the most important concept in the theory and practice of modern finance. As such it is the proper framework for explaining the systematic financial losses that occur during the business cycle. Eugen von B hm Bawerk and Irving Fisher developed the modern theory of the net present value and the financial theory of the business cycle developed in this book is rooted in their tradition. Although financial elements played a central role in their respective theories Keynes and Hayek did not use the net present value. This failure created problems that still haunt business cycle theory today. This book addresses these problems and attempts to steer financial theories of the business cycle back to the course set by B hm Bawerk and Fisher. In addition to macroeconomists this book will appeal to financial economists money and banking experts accountants financial analysts and businesspeople generally. **Essays in Economics: Macroeconomic analyzes and perspectives of economic thought** Muhammad Mustafa Rashid, 2022-06-28

prosperity go together In order to increase everyone's income governments should generate competition and outlaw mergers among large and profitable firms Inequality arises from monopoly capitalism because then wages lag behind productivity and generate a rising wage productivity gap This is the ultimate source of almost all economic troubles and imbalances While the growing gap is inherently unfair it also leads to vast income disparity and wealth concentration stock market bubbles and crashes recessions and eventually depressions It is the rise in the wage gap that preceded the Great Depression of the 1930s and now the Great Recession of 2008 Hence governments should not stifle competition and vigorously enforce anti trust laws
