Malov,2013-10-22 International Series of Monographs in Automation and Automatic Control Volume 7 Fundamentals of Automation and Remote Control describes the complex systems of automatic control and telecontrol This text is a translation from the second Russian edition This book contains descriptive material on the fundamentals of automation and remote control with attention to electrical components and systems Part I deals with the basic components of automation and remote control such as functions and general characteristics and electromechanical ferromagnetic and electronic and radioactive components The construction of automation systems that use radioactive isotopes is given as an example where the penetrating power of the radioactive radiation can measure the thickness of an object Part II discusses automation systems and describes the principles of stability analysis that are needed in the dynamics of automatic regulation and control follower and measuring systems A schematic diagram of an automatic speed regulator is analyzed in detail as an example Part III is a description of the many remote control systems that are used for example in signaling systems in telemetry systems and in command link systems The importance of communication channels to remote control systems is also pointed out Long range signaling and telecontrol which uses selection methods to assign the correct signals are explained A diagram of a telecontrol unit with time separation of signals is illustrated and the protection of the

unit from employing distorted signals is explained Mechanical engineers technicians and students with serious interest in automatic control and telecontrol will find this book valuable Introduction to automatic control systems Robert N.
