John Shamma, 2024-07-03 Cataract surgery with 25 30 million surgeries per year has become one of most popular surgeries in the world The calculation of its power is of utmost importance As new premium intraocular lenses IOLs and modern surgical techniques have been developed the demand has grown exponentially not only for eliminating cataracts but also for getting rid of the need for glasses This book offers a comprehensive overview of IOL power calculations and its various formulas and methods Chapters discuss use of the diagnostic biometry devices that provide the measurements and the management of different clinical situations where particular modifications must be applied Chapters also discuss the newest generation of multifocal and toric IOLs that can only be implanted if no residual refraction is planned for which implies a perfect mastery of all the IOL calculation process This book marks the first time in ophthalmological history that all the main leaders in the field have collaborated in a project that will undoubtedly be the reference for the next ten years Intraocular Lens Calculations is a must have resource for cataract and refractive surgeons as well as technicians and anyone dealing with this subject **Adaptive Mechanisms in the Ecology of Vision** S. Archer, M.B. Djamgoz, E. Loew, J.C. Partridge, S. Vallerga, 2013-04-17 John Lythgoe was one of the pioneers of the Ecology of Vision a subject that he ably delineated in his classic and inspirational book published some 20 years ago 1 At heart the original book aimed generally to identify inter relationships between vision animal behaviour and the environment John Lythgoe excelled at identifying the interesting questions in the ecology of an animal that fitted the answers presented by an analysis of the visual system Over the last twenty years however since Lythgoe's landmark publication much progress has been made and the field has broadened considerably In particular our understanding of the adaptive

mechanisms underlying the ecology of vision has reached considerable depths extending to the molecular dimension partly as a result of development and application of new techniques This complements the advances made in parallel in clinically oriented vision research 2 The current book endeavours to review the progress made in the ecology of vision field by bringing together many of the major researchers presently active in the expanded subject area The contents deal with theoretical and physical considerations of light and photoreception present examples of visual system structure and function and delve into aspects of visual behaviour and communication Throughout the book we have tried to emphasise one of the major themes to emerge within the ecology of vision the high degree of adaptability that visual mechanisms are capable of undergoing in response to diverse and dynamic environments and behaviours
